

Variations in the DISASTER MODEL

1. Size of circle of Venn diagram may vary to indicate varying size of tectonic event or vulnerability
2. Location of circles in the diagram may come closer or move further apart to indicate proximity of event to vulnerable population

IN EACH CASE LOOK AT AND COMMENT ON THE SIZE OF THE DISASTER

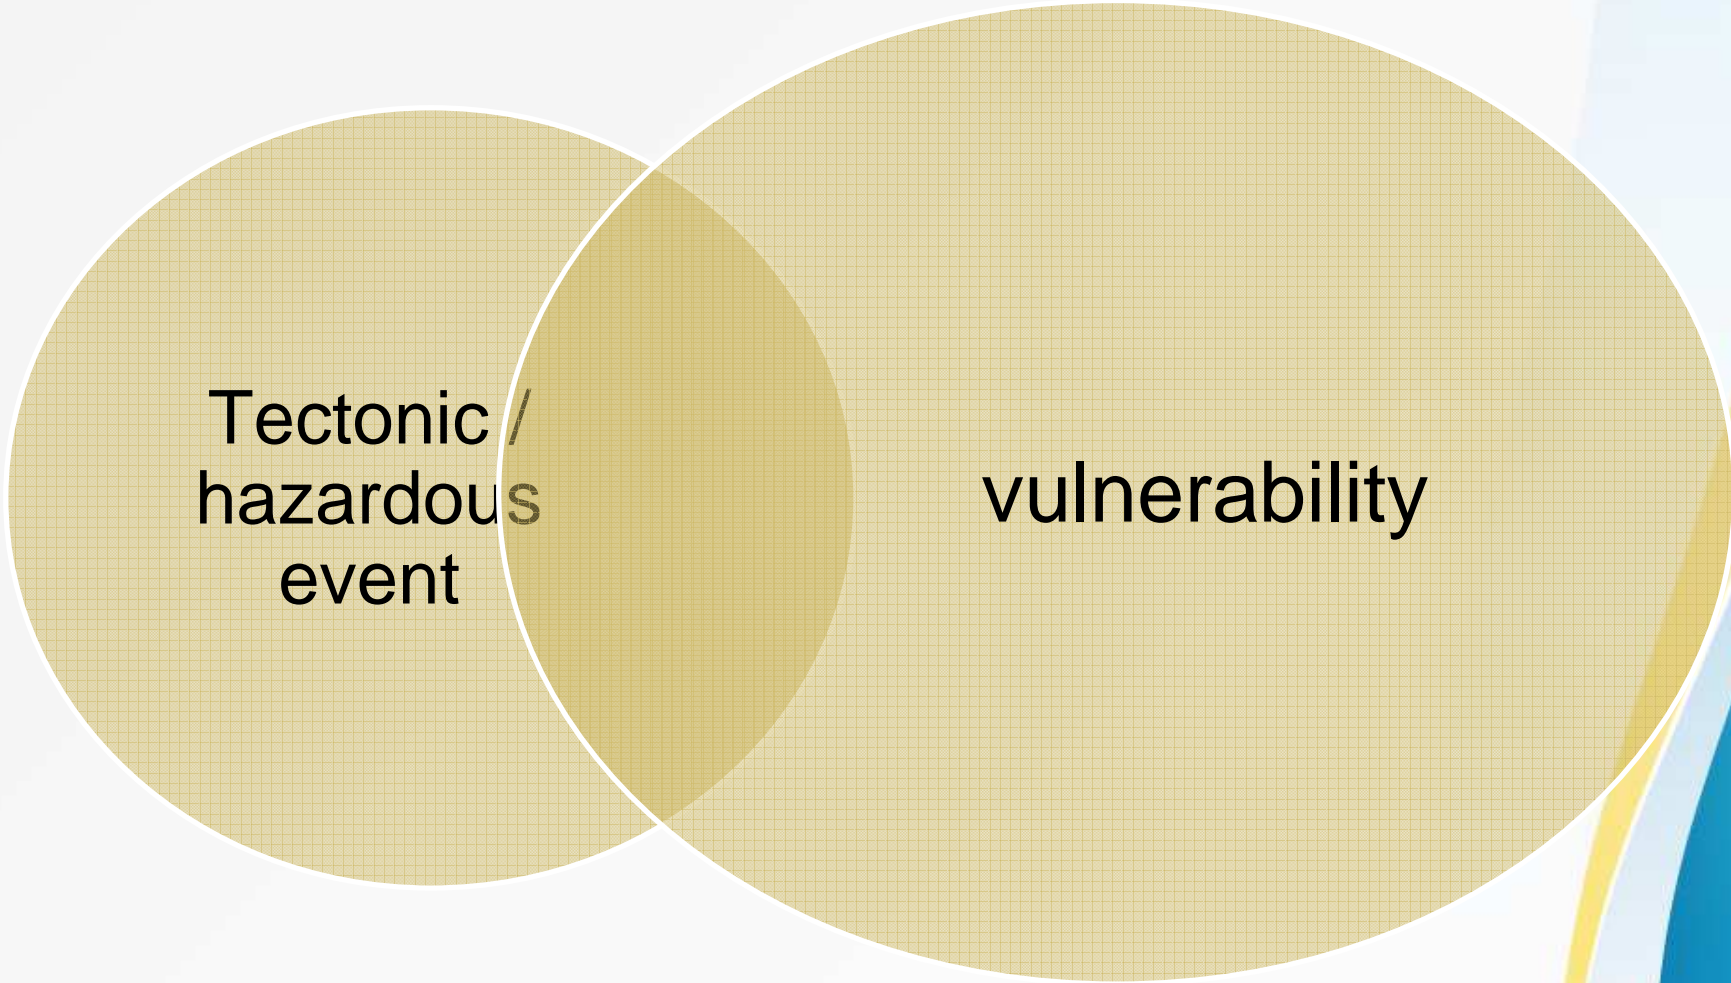

EXTREMELY LARGE TECTONIC / HAZARDOUS EVENT

Tectonic /
hazardous event

vulnerability

LARGE VULNERABLE POPULATION

Tectonic/ hazardous event and vulnerable population in close proximity

Tectonic / hazardous event not very close to each other

**Tectonic /
hazardous
event**

vulnerability
