

Process filtration specialist manufacturer

Our partner for process filtration makes what it sells.

They control their own quality, cost and lead times.
Their rigorous procedures and approvals ensure that quality is assured when their products are chosen.

Their success is underpinned by quality and also through the application of our knowledge.

As well as what they make and how they make it, is how their products are applied to our customers.

This is our partners key differentiator and is the secret of their progression into a true, globally recognised brand.

Do you know that our partner provides:

- Melt blown depth filters in polypropylene or nylon media
- High performance pleated membrane filters for critical applications, available with PES, PTFE, Halar or Nylon media
- Pleated depth filters in a wider range of materials including polypropylene, glass fibre and Halar
- Process liquid purification cartridges containing activated carbon
- A wide range of capsule filters
- High flow systems for large flow processes
