

Population Project

http://www3.geosc.psu.edu/~dmb53/Earth_System_Models/Pop_Modeling.html

has lots of models and questions.

Run the models and answer the 14 questions on the page.

After you have answered all of the 14 questions, I want you to write at least a page describing your perfect world.

- How many people live in your world?
- How much pollution is in your world?
- How much food is there?
- Is there is enough food production for the people who live here?
- Are your death and birth rates different?
- How sustainable and wasteful is your world?
