High Point calculation example for RINGMASTER:

RINGMASTER competed in 19 races out of possible 24.  
RINGMASTER beat 67 boats out of a maximum possible 98.

The formula is as follows:  $(19+67)/(24+98) = 86/122 = .705$

NOTE:

The formula factors in the number of races that the boat competed in as well as the number of boats beat.  
There are no drops and there is no allowance made for RC duty.  
Only boats that actually competed in a given race are factored into the formula.
