HEAVY DUTY BALE SPEAR

(MF490002/MF490001)

This is not your average bale spear. The attachments we manufacture are tough, just like they should be. The light weight bale spears offered by the competition may be fine for the hobby farmer, but we understand you're running a business and you need attachments that work just as hard as you do.

Having a rich agricultural background, we understand how a failed piece of equipment can take precious time from an already pressing schedule. That's why everything we manufacture at CWC really is Heavy Duty. Quality built, by real craftsmen. Every member of our team takes pride in their work, and we take pride in them.

Covered by a full warranty against defect or component failure for a full year!

Standard models MF490002 and MF490001 are rated for a staggering 3500 pounds. MF490002 utilizes two conus 2, 49" tines rated at over 2,600 pounds apiece that are spaced 36 inches apart on center. MF490001 uses one conus 2, 49" tine mounted near the top of the frame and two conus 1, 24" tines, which are rated at nearly 1400 pounds apiece, as stabilizer spikes, 36 inches apart on center. The top roll back guard on both models is constructed from ½" thick flat bar and is twelve inches tall. This is that last FEL bale spear you'll have to buy!
