Ava – 24/7 Accessible Life

An app that facilitates 2-way communication between deaf and hearing people who don't know sign language. Ava turns smartphones in a room into smart microphones, allowing the deaf/hard-of-hearing person to read the entire conversation as real-time captions- including who said what. The app provides 24/7 real-time captioning (with up to 95% accuracy, based on artificial intelligence), on their smartphone.
