VIDEO DISPLAY CONSULTANTS

*Specializing in
LED • PMV • Projection • Video Wall
Technologies*

Providing the finest video technologies for any project!

THE SINGLE SOURCE...

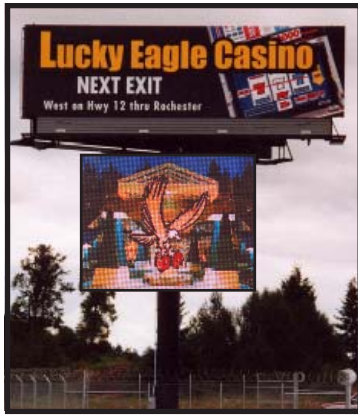

PMV Displays

Patent Pending

PM Video displays are the new alternatives to standard LED displays. Designed specifically for the billboard industry, PMVs feature low power consumption and ease of installation. The PMV is available in two models. The first is a high contrast face which is enhanced in the day and video capable at night. The second is a low contrast face with full video capability day or night. PMV offers all the advantages of a standard LED at a fraction of the cost.

Video Projection

For large screen interior displays, the solution may be video projection technology. The new generation of nearly seamless projector technologies offer bright, high resolution imagery. With the use of high gain screens and the options of front or rear projection, video projection is effective in many applications.

LEDs

High-definition, full-color LED units display three-dimensional graphics and animations to create complete presentations of mixed video images and messages, producing a high impact advertising venue. These Red, Green, Blue (RGB) or Red, Green (RG) LED units accept standard composite video, VGA or DVI input from a personal computer, while maintaining low power consumption and avoiding costly maintenance and service charges. These displays not only can use any IBM compatible display program, but they can integrate any file with any video image or frame, giving total flexibility to the user.

*RGB Interior pixel spacing (pitch)
from 6 mm to 25.4 mm (.23" to 1")
RGB Exterior pixel spacing (pitch)
from 10 mm to 88.9 mm (.4" to 3.5")*
