

2-28-22. Well for my first blog of 2022 I picked a tumultuous moment in history. Currently, I am working on upgrading the Swedish Army to current standards, with a more comprehensive TO&E. I have thought about expanding 21st Century Assault. I have the Estonian, Latvian and Ukrainian armies and have had them for a while. Other projects got in the way and now, well I will complete that at some point. I don't know what I can get to this year. Real life job promotion placed new responsibilities upon me that seem to take up a lot of my time that was dedicated to The Project. To quote Lone Watie, "I will endeavor to persevere." ENJOY.

8-15-22. Massive update. I have added the U.S. XVIII Airborne Corps to the Advanced Assault US Army page. I have chosen to model the Corps based on the Force XXI concept that was being developed in the late 90s. I have also chosen to place the 48th Infantry Brigade (M) GaARNG with the 24th ID (M) instead of replacing it all with the 3rd ID. The 48th is modeled after the AOE concept to give contrast to the Force XXI units. In all probability conversion to Force XXI probably would have taken place alongside the rest of the Division. Interestingly enough, the 48th IBCT GaARNG is back as a round out brigade with the 3rd ID. General Carl Vouno's concept of Total Force worked out after all.

I have also included the XO units for the Armor and Mechanized Infantry units of the 24th ID as an experiment. See the Rule 4. C. tab on the 24th ID page. You will find new Aircraft Attack Capability spreadsheets on the NATO and Warsaw Pact home pages. These spreadsheets consolidate aircraft weapon station and operating altitude information for easy reference. Finally, I have updated the

OH-58D Direct Fire Data based on upgrades that occurred to the aircraft. ENJOY!!

10-18-22. Back by popular demand is the 3-73rd Armor Battalion in the 82nd Airborne Division. I have included it for historical purposes since by the late 90s it along with the Sheridans, was no longer part of the Force XXI Airborne Division. Have fun. Enjoy!

10-20-22. I updated (corrected) the U. S. MBT Direct Fire Data chart. It now more accurately reflects the anti-tank capabilities of the M829A2 APDU and the M830A1 MPAT/MPHE rounds. I also corrected the M551A1 to show the upgraded M51C Shillelagh. The U. S. Advanced Capabilities Spreadsheet now includes the M551A1 TTS values. ENJOY!
