

## Math 2471 Calculus III – Sample Test 2

1. Classify the critical points for

$$(i) \quad z = x^3 + y^3 - 3x - 12y + 20$$

$$(ii) \quad z = 3xy - x^2y - xy^2$$

2. Reverse the order of integration and integrate showing your steps.

$$\int_0^1 \int_{\sqrt{y}}^1 \frac{3 \, dx \, dy}{1 + x^3}$$

3. Find the volume bound by the paraboloid  $z = 2 - x^2 - y^2$  and the cone  $z = \sqrt{x^2 + y^2}$

4. Find the limits of integration of the triple integral

$$\iiint_V f(x, y, z) \, dV$$

where the volume is bound by

$$(i) \quad x = 0, x = 1, y = 0, z = 0, z = 1, \text{ and } z = 2 - y.$$

$$(ii) \quad x = 0, z = 0, z = 1 - y^2, \text{ and } z = 2 - x.$$

5. Set of the triple integral  $\iiint_V z \, dV$  in both cylindrical and spherical coordinates for the volume inside both the hemisphere  $x^2 + y^2 + z^2 = 8$  and the cone  $z = \sqrt{x^2 + y^2}$ .
