

The Mat Stacks components are readily adaptable to be in used carts and pallet racks as well. Depending on your needs we can provide you with the optimum design to integrate mobile storage into your overall mat handling program.

The Mat Stacks are fitted into a tube steel frame. This preserves the 2 inch adjustability of the trays.

4 inch casters are used for loading and mobility.

The example at the left will hold 24 individual mats.

3 mat and group mat trays can also be fitted into the cart frame.
