# THE PREFERRED ROLLING DOOR SITE

## [cooksondoor.com](http://cooksondoor.com)

The Cookson Company strives to maintain the most informative web site in the door industry. General information about each of Cookson's products as well as full specifications and typical details are available. The names, phone numbers and e-mail addresses of sales and technical people are provided along with those of local distributors. The site can even be used for ordering product literature and technical data.

## From the Home Page, visitors can view:

### Products

- Product offering
- General information about each product
- Download technical data from design manual
- On-line information requests
- Download catalogs

### What's New

- See latest products and literature available
- Get updates on product changes

### Information

- Order product literature and download catalogs

### Contacts

- Find a sales / technical person or local distributor

### Tech Info

- Download Maintenance Manuals, Wiring diagrams & Installation Instructions
- View Approvals and Listings

## And Our

# Electronic Design Manual

### Interactive Detail Tools

Cookson provides the design professional interactive detail tools to get the exact details for any project. By selecting the door type, operation, door mounting and finish the Cookson Electronic Design Manual will provide details and specifications in a PDF format, specifications in a Word format and a shop drawing in a CAD compatible format. All are created for the door that was selected. The need to edit specifications and details to match the door requirements has been eliminated.

### Design Manual Sheet

By selecting the door type, operation, door mounting and finish the Electronic Design Manual will produce a design sheet for the specific door that has been defined. The design sheet includes an elevation, section, plan view and details of the door components as well as dimensional information. The design sheet also includes a complete specification of the defined door in 3-part CSI format.

### Specifications in Word

Cookson's Electronic Design Manual provides complete specifications in Word format that can be merged with other construction documents. There is no editing required, and no need to scan or type specifications, just define the door and get a complete specification in Word.

### CAD Compatible Drawings

Define a door, add the width and height, and Cookson's Electronic Design Manual will produce an actual shop drawing in a CAD compatible format. Part or all of the drawing can be copied into construction drawings. All of the dimensions are accurate for the size of door that was input.

### Cookson's Electronic Design Manual for Custom Information

Every Cookson Door is custom made for specific projects. With Cookson's Electronic design manual we offer custom design tools to detail our custom doors. We eliminate any guess work by allowing the design professional to design a custom door and then get all the components required to specify and detail that door. Whether it is a design manual sheet to show a client, a specification to include with the job specs, or a drawing detail that can be incorporated in the project drawings, Cookson's Electronic Design Manual can provide it all quickly and easily.
