

EUROPE NUCLEAR TARGET DETONATIONS

100 MEGATON NUKE 'TSAR' STRIKE IN EUROPE'S CAPITALS

This same scenario would be true for continental Europe. The same outcome would be in place as the area is similar in size and scope as that of the USA. Consider that with just over 100 single hydrogen bombs detonated in the USA and Europe, nearly 1 billion people would perish eventually within 3 weeks of a strike. Again, this percentage is but a fraction of the arsenal both the USA and Russia currently possesses.

The temperature at the center of a nuclear explosion depends on the yield of the weapon. An atom bomb relies on nuclear fission, a hydrogen bomb uses both fusion and fission. The temperature at the core of a detonation is always between 50 and 150 million degrees Fahrenheit.

Given this scenario, it would thus only take approximately 20-30 hydrogen bombs to completely destroy Europe. If the major urban centers were targeted alone, 90 percent of the 300+ million people of Europe would perish within 3 weeks. As the scenario portrays, 1 detonation alone on each major city from the list would vaporize instantaneously over 30 million people.
