

What do you know about the flu shot?

**The flu vaccine does not prevent the flu.
What DOES it do?**

REAL  ORGANIC TRUTH

Flu Facts

- The flu shot has **25 mcg (25,000 parts per billion or "ppb")** of mercury in the form of thimerosal. The "thimerosal-free" version of the flu shot still contains **up to 3 mcg (300 ppb - 3000 ppb)** of mercury which is given to young children and pregnant women.
- **2 ppb** is the **maximum** amount of mercury that deems water "safe for drinking" **anything over 200 ppb** of mercury is considered **TOXIC**. (cdc.gov)
- Flu vaccines contain **chicken eggs or genetically-engineered dog kidney, formaldehyde**, antibiotics, hydrocortisone, non-human protein and genetic materials, polysorbate 80, **Thimerosal**, MSG (monosodium glutamate), all of which are considered poisonous to humans.
- The flu shot is **ineffective** and **frequently** produces flu-like symptoms.
- **484,629 adverse reactions** have been reported to the Vaccine Adverse Events Reporting System.
- Possible reactions include: **Paralysis, severe allergic reaction, vomiting, chronic exhaustion, facial palsy, blood and lymphatic system disorders, convulsions** and more.
- The flu can be prevented and treated safely using nutritional supplements and natural remedies.
