

Rel. Mat.:41

Positioning For:

MANAGEMENT COMMENTS

- P64HE101 is a mid-maturity, high yielding, disease tolerant high-oleic ExpressSun hybrid adapted to the central sunflower growing region of North and South Dakota.
- Excellent Phomopsis and test weight

SUITABILITY RATINGS

KEY ENVIRONMENTS

High Yield Environment	Suitable
Low Yield Environment	Suitable
Fields at High Risk of Sclerotinia	Manage Appropriately
Minimum/No-Till Environments	Suitable

SUITABILITY

Late Harvest	Suitable
DuPont(TM) ExpressSun(TM) Herbicide System	Highly Suitable
Hulling Market	Suitable

SOILS

Early Planting/Cold Soils	Suitable

IMPORTANT: Trait rating scores provide key information useful in selection and management of Pioneer® brand products in your area. Information and ratings are based on comparisons with other Pioneer brand products, not competitive products. Information and scores are assigned by DuPont Pioneer Research Managers. Scores are based on period-of-years testing through 2015 harvest and were the latest available at time of printing. Some scores may change after 2015 harvest. Scores represent an average of performance data across areas of adaptation, multiple growing conditions, and a wide range of both climate and soil types, and may not predict future results. All products within a hybrid family receive the same score unless observations indicate a significant difference. Individual product responses are variable and subject to a variety of environmental, disease and pest pressures. Please use this information as only one component of your product positioning decision. Refer to www.pioneer.com/products or contact a Pioneer sales professional for the latest and most complete listing of traits and scores for each Pioneer brand product and for product placement and management suggestions specific to your operation and local conditions.
