March 2019

Air pollution in Europe (EU-28)

MAGIC

Envisaging a world with greener cities

- 391 000 premature yearly death due to PM_{2.5}
- 76 000 premature yearly death due to NO₂
- 16% of lung cancer deaths caused by air pollution
- total health related external costs of air pollution between €330 and €940 billion per year

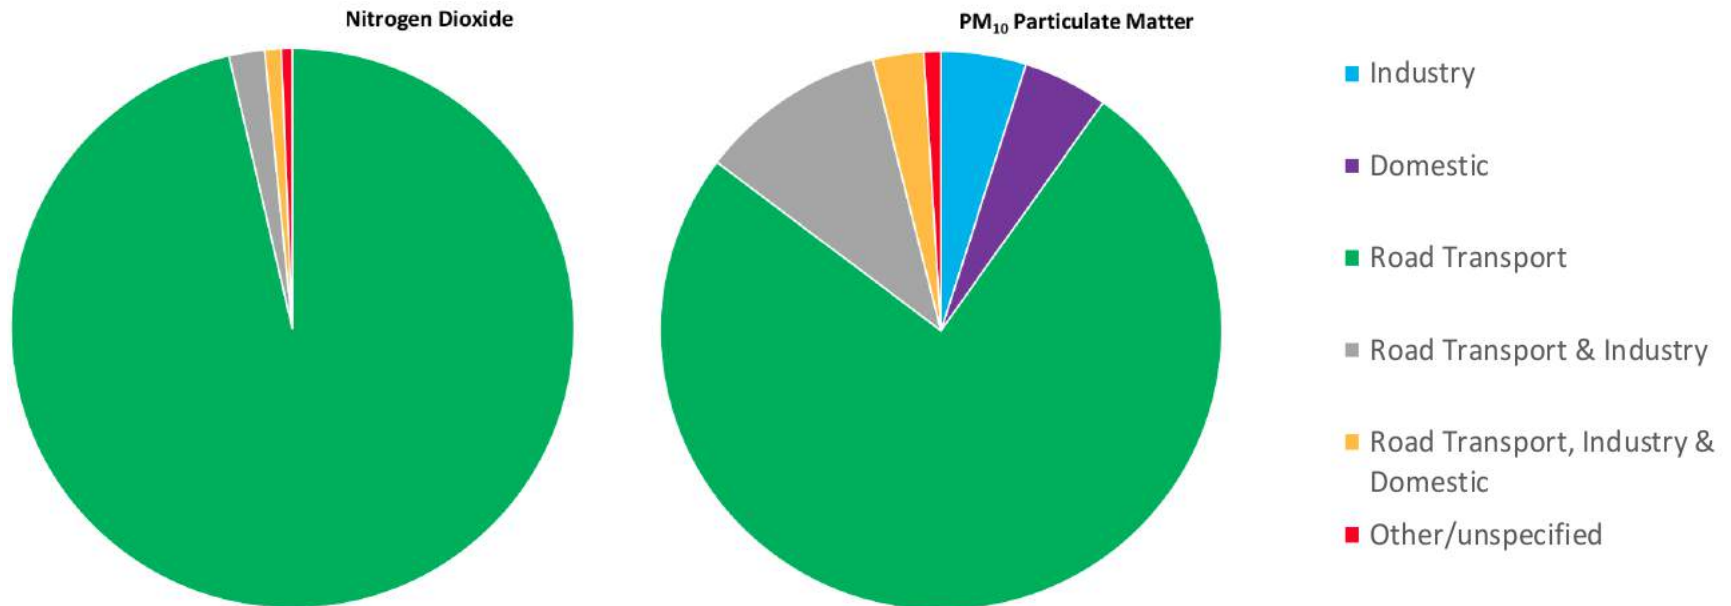

Sources: EEA (2018), WHO (2019), European Commission (2013)

Pollution sources

MAGIC

Envisaging a world with greener cities

Pollution sources at Air Quality Management Areas, UK

Source: Defra 2018

Vehicle emissions modelling

MAGIC

Envisaging a world with greener cities

- Average speed versus acceleration
- Usage of transport models (e.g. SATURN, PTV Vissim)
- Computer vision

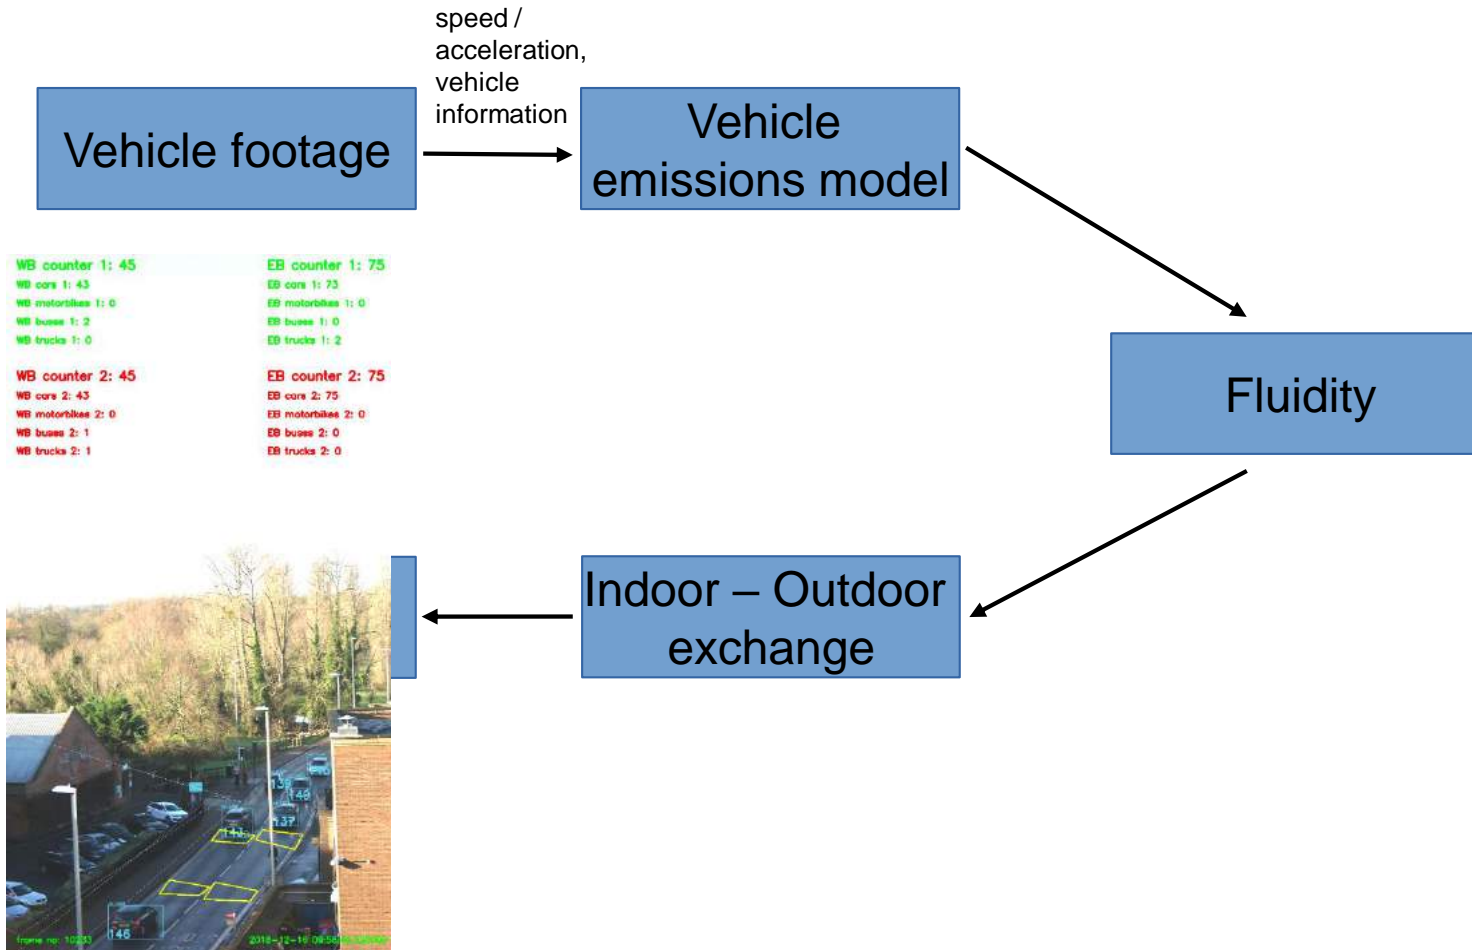

Frey, H Christopher and Alper Unal. "Use of On-Board Tailpipe Emissions Measurements for Development of Mobile Source Emission Factors." (2002)

Cambridge Study (Dec 18)

MAGIC

Envisaging a world with greener cities

- Comparison of particulate matter sensors and traffic footage

Analysis of video footage

MAGIC

Envisaging a world with greener cities

Needed:

- detection of vehicles
- tracking of vehicles
- vehicle counts
- positional data (for speed and acceleration)

Vehicle Detection

MAGIC

Envisaging a world with greener cities

- YOLO v3* detection algorithm:
 - Fast (up to 45 fps in theory)
 - Can detect cars / LGVs, HGVs, buses, bicycles and motorbikes
 - Main challenges:
 - Congestion
 - Lighting
 - Uncertainty regarding HGV & bus
 - Size of objects (problems detecting bikes / motorbikes)

Field study this summer

MAGIC

Envisaging a world with greener cities

- Apply to larger area (network of cameras)
- Add number plate recognition
- Emissions model
- Validate vehicle emissions results of emissions model and Fluidity
