Take Action and Mitigate Risk in
Delivering Patient Care

About Predicata

Predicata has been working with hospitals and healthcare systems nationwide and has identified costly gaps that can be overlooked when strategies are implemented to meet the main healthcare objectives of improving cost, quality, and outcomes. Predicata has worked relentlessly with healthcare systems to custom create solutions that support the health systems strategies and can rapidly diagnose those costly gaps and variations by identifying the steps to drive meaningful results.

Mitigate Risk in Delivering Patient Care

- As payers shift from volume to value based payment, improving clinical quality is a top priority for hospitals.
- By 2018 up to 9% of a hospital's Medicare income will be at risk due to CMS (Centers for Medicare & Medicaid Services) quality performance penalties.
- Uncertainty as the healthcare landscape changes demands health system stay ahead of the curve.

Predicata products and services deliver cost savings, and quality improvement opportunities for the following areas:

**Supply Chain
Expense**

**Service Line
Device Utilization**

**Risk
Management**

Improve just culture scores by 27%

Track performance to highlight areas for improvement.

Quality insight can deliver the data you need to act.

PerformanceLinQ Solution

Predicata's powerful and actionable Quality Improvement and Risk Management software solution Performance LinQ, simplifies integration and analysis of quality measures to trend and report on quality performance easily and cost effectively.

Risk Management

- Customized incident reports and aggregates occurrence data to produce reports that give you insight into the "how" and "why" of important risk events.
- Can help you pinpoint the factors that affect your organization's performance, and enables you to act immediately to mitigate future risk and provide the best results for your staff and their patients.

Quality Improvement

- The ability to track performance to highlight areas for improvement. With tools for monitoring performance measures, statistical analysis, peer review, and physician reappointment, quality insight delivers analysis of data and provides easy-to-interpret dashboards to every level of the organization.
- Whether you're checking common links between patient falls, or the time of day medication errors occur, quality insight can deliver the data you need to act.
