Using the Table Saw Jig

How to Use It

1. Install a rip blade on the table saw.
2. Set the fence 2-5/8" to the right of the blade.
3. With the blade fully recessed, place the Table Saw Jig up to the fence and install two feather boards.
4. Slide the culm in the jig and place the check split about 30 degrees off center, I've found it advantageous to saw the culm in thirds. Secure the bungee cords tightly on the culm.
5. Advance the blade so that it just clears the bamboo.
6. Push the jig with the bamboo through the saw,
7. Remove the third cut piece of bamboo and mark the cut side, this will be helpful when using the Band Saw Jig.
8. Replace the remainder piece of bamboo in the jig so that you will cut it in half.
9. Push the jig with the bamboo through the saw,
10. Remove the two pieces of bamboo and mark the cut side

Thank you for the purchase, should you have any problems/concerns please feel free to contact me.
