HE&W Consulting | “Enabling a Sustainable Future”

consulting.heandw.com

Welcome to HE&W Consulting, the leading multidisciplinary consultancy in the Caribbean environment and water sector.

HE&W Consulting is a multi-disciplinary environment and water sector consultancy offering: **engineering design**; **technical consulting**; **project management**; **educational**; **research and development**; and **specialist advisory** services to clientele across the Caribbean. We are the regional authority on sustainable development, and we are here to serve *you*.

Connected

We are proud members of HE&W Group, *the leading family of companies in the Caribbean sustainability sector*; giving us access to a quickly expanding network of professionals, member companies, partners, brand suppliers, software developers, and more.

Why We Exist

We exist to **enhance** Caribbean societies, **protect** communities and the natural and built environment, and **preserve** natural resources. This three-fold aim is achieved through the consistent application of best practices on all projects, and the development of novel solutions for the environment and water sector which are fit for the Caribbean context.

Experience and Expertise

Our nine core areas of expertise are listed to the right. Our team draws from **more than 100 years' combined experience** across these disciplines, ensuring the delivery of industry-leading service to you. Whatever the challenge, however big or small, we are here to contribute to the development and successful execution of your project.

Areas of Expertise:

- Infrastructure and Development
- Climate Change Adaptation
- Hazard Mitigation and Disaster Management
- Natural Resources Management
- Agriculture, Fisheries and Aquaculture
- Environmental and Ecosystems Protection
- Wastewater and Solid Waste Management
- Knowledge Sharing and Capacity Building
- Policy and Legislative Development

Our Services:

Our services are designed to meet the needs of a changing region, environment and climate. We offer leading technical and non-technical services in all of our core competencies listed above, all delivered with long-term sustainability and resilience in mind.

Engineering Design

We carry out the civil, structural, environmental, hydraulic and coastal engineering design of infrastructure of all types and in a wide range of environments, ensuring climate and hazard resilience, economy, and longevity of use.

Technical Consulting

Whether it's environmental protection, disaster management or sustainable development planning, our technical consultancy services help us to create a safer and more sustainable environment for you and those around you.

Project Management

Quality, time and cost; these are the three words which guide our project management work. We consistently apply industry-leading best practices to ensure a smooth process from project start to finish.

Educational

Knowledge sharing is an integral part of what we do. Through workshop, seminar and public education campaign design and execution, we are building regional capacity to meet the environmental challenges of the day.

Research and Development

Our research and development services help us to understand what is unique about the environment and water sector challenges we face in the Caribbean, and to innovate and develop fit-for-purpose solutions.

Specialist Advisory

We give sound technical and non-technical specialist advice to clientele across the region in all of our areas of expertise; backed by years of practical experience, innovative leadership, and industry-leading research.

Analysis and Modelling

We make use of industry-leading analytical and modelling tools to test and lend professional credibility to our designed engineering solutions. In this way, we are able to better understand and predict their performance in the real-world environment.

Project Management

We are certified to the Project Management Professional level with the Project Management Institute, and are well equipped to bring your project goals to fruition on time and to budget — *however ambitious or modest they may be.*

Our Research-based Approach

As a point of principle and passion, our team of experts remains abreast of the latest developments in our field. Through our commitment to research, we are able to apply leading-edge best practice approaches to the design of solutions for **you**.
