

DDMS - Playback, Record, and Save Clip on Phone

Playback

In Live View, select the camera you would like to playback. Click on the reel (round icon) immediately below the camera screen. It will begin a playback of the 24 hours going back to midnight on the current day. To view another day, click on the date, above the blue scroll bar, and select the date you would like to view. The video will begin playback at midnight on the day you selected. Use the blue scroll bar to move to the time you would like to view.

Another way to access playback and/or multiple cams for playback:

Goto Home
Select Playback
Click + in one of the squares
Choose the Cam to view

Playback will begin at midnight on current date. Use the slide bar at the bottom to choose the time to view. If you wish to choose another date click the date above the slide bar. Choose a date with a Blue Reel next to the date. The Blue Reel indicates there is recorded footage on that day. Once the date is selected, playback will begin at midnight on the date selected. Use the slide bar at the bottom to choose the time to view.

Record and Save Clip

When the clip starts choose Manual Record (video icon) to start recording (a red light displays on the screen). Choose Manual Record to stop recording once the clip has been captured (red light turns off)

Send clip to the Photo Album on the phone

Goto Home
Choose Me (bottom Right)
Choose My Files
Choose Edit (top right corner icon)
Click on the clip you want to send
Choose the bottom center icon
Choose how to send the clip (it can be emailed, texted, or viewed)
Or
Send it from Local File
Click the bottom left button
Choose how to send the clip (it can be emailed using these steps)

***If you send it to your photo album and the clip is not going into the Photo Album when you choose export you may need to allow DMSS to have access to your photo album

On the phone, goto phone settings and Scroll down and choose DMSS. Choose Photos and set to "Read and Write"
