Use the Read–Draw–Write process to solve each problem.

1. Kayla has 12 cups of flour. She uses $\frac{2}{6}$ of the flour to make pancakes. She uses $\frac{3}{4}$ of the remaining flour to make cookies, and then saves the rest of the flour. How many cups of flour does Kayla use to make cookies?
2. Sasha spends $\frac{3}{8}$ of her money on a game. She uses $\frac{1}{5}$ of the remaining money on a snack. She has \$20 left over. How much money did Sasha have to start?
3. Leo completes a race in 9 hours. Blake completes the same race in $\frac{2}{3}$ as much time as Leo. How many more hours does it take Leo to complete the race than Blake?

REMEMBER

4. Draw a model to make like units. Then find the sum.

$$\frac{2}{3} + \frac{7}{12} = \underline{\hspace{1cm}} + \underline{\hspace{1cm}} = \underline{\hspace{1cm}}$$
