PRODUCT SPECIFICATIONS

Panel Track Profile

- White painted aluminum profile.
- See mounting depth requirements on page 18 for panel track sizes.

Panel Track Splice

- Automatically comes with any window opening over 144" wide – track ships from factory in (2) equal size pieces.
- Recommended (request when placing order) with window openings over 100" wide to reduce risk of freight damage and provide easier handling by installers.
- Splice plate easily & securely connects separate tracks together to operate as a single track unit.
- Installers prefer the convenience of handling smaller tracks on the job site, then connecting together at installation.

Panel Size / Stacking Width

- **12" Minimum Panel Width** (includes 3" for overlap).
- **12" Minimum Panel Height.**
- **46" Maximum Panel Width** (includes 3" for overlap).
- **144" Maximum Panel Height.**
- individual panel size varies depending on overall shade width & panel configuration.

NOTE: The smaller the panel width, the narrower the stacking space

To calculate stacking width; overall width + (number of overlaps x 3) then divide by number of panels

Example # 1 – 3 panel 112" W + 6 (2 overlaps x 3 = 6) = 118 divide by 3 panels = 39-3/8" stacking / panel width

Example # 2 – 4 panel 112" W + 9 (3 overlaps x 3 = 9) = 121 divide by 4 panels = 30-1/4" stacking / panel width

PANEL TRACK HOW TO MEASURE

**Note: Projection of window handles / cranks could interfere with panel track panels.
Refer to "mounting depth requirements" above for projection clearance**

Inside Mount (IB) Installation - Window

To find width: Measure the opening across the top where the headrail is to be installed from inside of jamb on left to inside of jamb on right. **Round the measurement down to the nearest 1/8". Refer to mounting depth requirements.**

Inside Mount

To find height: Measure from the inside top of the opening on the left, at the center, and on the right to the sill; **round the measurement down to the nearest 1/8" and note the smallest dimension. Do not make any allowances: the factory will make all adjustments so the headrail will fit the opening properly and the panels will clear the sill by 1/2".**

Outside Mount (OB) Installation – Window

To find width: Measure the width of the area to be covered at the place where the headrail will be installed to the nearest 1/8". Blind should overlap **opening at least 4"** on each side to ensure privacy. To calculate stack dimensions, refer to page 7.

Outside Mount

To find height: Measure the height of the area to be covered and **round down to the nearest 1/8"**. Blind should extend at **least 3" above and 3" below opening or window moulding.**

Outside Mount (OB) Installation - Patio Door / Room Divider

To find width: Measure the width of the area to be covered at the place where the headrail will be installed to the nearest 1/8". Blind should overlap opening at least 4" on each side.

To find height: Measure the height of the area to be covered and **round down to the nearest 1/8"**. Blind should extend **at least 3" above opening or window moulding.**

For ceiling-to-floor installations, deduct 1/2" for proper clearance.

Specifying OM measurement means the factory makes no allowances.

Special Measuring & Installation Considerations

Caution: Panel Tracks installed on windows near wall or baseboard heaters must clear the heaters by 12" above and 6" to the side.

Stretching of panel materials is probable with Textured materials:

IB Mount - we do not recommend IB mount due to probable stretching

OB Mount - extra adjustment recommended for placement of mounting brackets allowing panel clearance above the floor to anticipate panel material stretching:

- material can stretch up to 1" length

WARNING

Young children can **STRANGLE** in cord loops. They can also wrap cords around their necks and **STRANGLE**.

Child Safety Cord Tensioner

Attach the cord tensioner on the cord loop to the wall or window casement. This can prevent children from pulling cord loops around their necks.
