POLYSERTS

Polyserts are the ideal fixing points in concrete, precast concrete and terrazzo for installation of Window and Door Frames, Door Jambs, Curtain Tracks, Ceiling and Wall Strapping. Polyserts are distinctively colour coded and easily located when form work has been removed. They protect the shanks of wood and lag screws or nails from the damaging corrosion effects of alkali. Drilling of pilot holes of the appropriate size facilitates screw entry. Easily installed from either inside or outside of wood formwork or pressed into position on exposed surfaces of freshly poured concrete. Any part of the fixing faces or exposed sides of Polyserts may be used without losing holding strength.
