

Global Survival Industries Roadster Stay Alive Kit User Guide

WINTER STORMS AND EXTREME COLD

1. Stay in your vehicle. Do not leave the vehicle to search for assistance unless you can see a building/structure nearby where you KNOW you can take shelter.

2. On occasion, run engine for about 10 minutes each hour. Be careful of carbon monoxide poisoning, keep the exhaust pipe clear of snow and open a downwind window slightly for ventilation.

3. **Take stock of your situation. If you may be stranded for awhile, your vehicle is now a survival tool. Think logically... not emotionally. We put a Roadster Stay Alive knife in your Roadster Stay Alive kit to cut out upholstery foam from a part of the vehicle you are not using. If you need to... cut the rear area ceiling covering to drop down and separate the front of your vehicle from the rear. Use the foam from back seat upholstery as a barricade from the front of the vehicle to the back as well. Your front seat is now your "cave". It will build up and hold heat much better than heating your entire vehicle.**

4. Your Roadster Stay Alive Emergency Blanket reflects up to 90% of your body heat back to you. It is water and windproof. Don't worry about having to fold it up later... **USE IT!** Huddle together for warmth. Use resources available to you such as newspapers, maps, car mats etc. as well.

5. Use the candles provided in your Roadster Stay Alive Kit to gain heat in the cab of your vehicle. Be cautious not to ignite vehicle upholstery etc. Place the candle on the lid of the metal container or in the container itself with the contents removed. Each candle will burn for approximately 3-4 hours.

6. At night, turn on your dome light so you can be seen. Be careful not to run down your battery though. Remember, run your engine every hour for about 10 minutes.

7. If you don't have a dome light and it is very dark, use your Roadster Stay Alive Light Sticks. These are very small, but put out a very good glow when it is dark.

8. Do minor exercises to keep your blood circulating. Clap your hands and move your arms and legs occasionally. Try not to stay in one position too long.

9. It is important to keep fluids in your body. The Roadster Stay Alive Kit metal container can be used for to gather snow for melting DO NOT EAT SNOW. It lowers your body temp. and burns calories to melt the snow. You need calories to stay warm.

10. We have provided candies for comfort and valuable sugar you may need.

11. Your Roadster Stay Alive Distress whistle can be heard for an extended range. It depends on weather conditions, humidity levels etc. on the distance the sound will travel. Use the distress whistle and save your voice and energy. Use three blasts then wait. Then three blasts again. Three blasts is the signal for distress.

12. Your Roadster Stay Alive Signal card is excellent for signaling during daylight hours, but you must have sun available to use it effectively. Follow the instruction illustration on the back of the card to use. Signal on the air and ground as well. You can also use your vehicle mirrors for this as well.
