

## Our Disease Management Programs

Through our disease management programs, we provide supportive care education of the disease process to the patient, family and caregivers. Education is a powerful tool in helping patients modify their lifestyle behaviors and optimally manage their condition. Our programs include:

- Alzheimer's Disease
- CHF (Congestive Heart Failure)
- COPD (Chronic Obstructive Pulmonary Disease)
- Diabetes
- Falls Prevention
- Hypertension
- Light Step (Infrared Light Therapy)
- Parkinson's Disease
- Stroke/TBI

## Our Hospital Transitional Care Programs

Our CHF, Heart Attack and Pneumonia Transitional Care Programs reduce hospital readmissions and emergent care visits by creating a smooth transition from hospital discharge to home.

**Call our office today for more information on home health care and for a free consultation to see if you qualify for services.**

## Benefits of Home Health

Advances in health care have made it possible for seniors to receive skilled nursing and therapy services in their own home. Home health care encourages quicker recovery, reduced need for emergency care, and an increased quality of life. In addition, it's cost-effective. Medicare covers all home health care services for patients who are eligible.

## What We Do

**Angels Care Home Health** is the premier provider of home health care services in the community. We provide skilled nursing care, restorative therapy and medical social services to our patients in their homes or wherever they may reside, including assisted living facilities and retirement communities.

## Why Choose Us?

We admit patients and answer calls 24 hours a day, every day. When our patients are first admitted onto service, they receive more visits from nurses and therapists in the first two weeks than is typical of the average home health agency. This extra support in the initial healing process is crucial in assisting the patient to regain their confidence and independence as quickly as possible.

## Our Team

Our team of health care professionals includes skilled nurses, occupational and physical therapists, speech-language pathologists, medical social workers, and home health aides.

## Who We Serve?

Patients who typically go on home health service require skilled nursing to manage a chronic condition like congestive heart failure, COPD, diabetes or dementia, or they may be recovering from an illness, injury, or surgery such as a hip replacement.

## We Partner With Your Physician

We administer medical services under the direction of our patients' physicians while strictly adhering to the physician's plan of care.

## You Have a Choice

Patients have a right to choose the home health care provider they want. (Ask your physician if you are a candidate for home health services.)

## Our Services

- Skilled observation and assessment
- Education of disease process
- Home safety and emergency education
- Medication assessment, instruction, and supervision
- Nutritional assessment and instruction
- Pain assessment and instruction
- Wound care
- Restorative therapy
- Medical social services
- Assistance with activities of daily living

## How Do I Qualify?

To qualify for home health benefits under the Medicare program, you must be under the care of a physician who orders the care provided. You must be in need of skilled care and you must be homebound. You may request home care by either talking directly with your physician or requesting a member of our staff to contact your doctor.

### *Patients Right to Choose:*

A patient may request home health services through the Medicare program through their physician (see patient criteria above). The patient has the right to choose which agency will provide services in their home.

# DISEASE MANAGEMENT PROGRAMS

**Angels**  
Care Home Health

An AngMar Managed Company

**GUN BARREL CITY • 903-887-0364**

A team of skilled nurses, therapists (PT, OT, Speech), home health aides, and medical social workers work collaboratively to provide comprehensive care and education for patients with respect to the following diseases or conditions.

### **Diabetes**

Includes education in patient self-management, blood glucose monitoring, diet, exercise, administration of insulin injections, wound evaluation, and medication education and reconciliation. Patient's physician receives printouts of results from glucometer.

### **COPD** (Chronic Obstructive Pulmonary Disease)

Includes education in patient self-management, energy conservation, medication education and reconciliation, infection control, and activity and exercise regimen. Patient receives self-care workbook and educational tools.

### **CHF** (Congestive Heart Failure)

Includes education in self-management, symptoms, daily weighing, recording and monitoring, activity and exercise regimen, dietary recommendations, and medication education and reconciliation.

### **Light Step** (Infrared Light Therapy)

Increases circulation and decreases pain due to diabetic neuropathy.

### **Alzheimer's Disease**

Includes therapy to improve gait, balance, and fine motor skills. Caregivers are provided an education on the disease process, and disease-specific caregiving strategies.

### **Falls Prevention**

Decreases incidence of falls and resulting hospitalizations using physical therapy and Anodyne® Therapy (noninvasive light therapy to decrease pain and increase circulation).

### **Stroke/TBI**

Provides patient and caregiver education and strategies to help patient rehabilitate at home.

### **Hypertension**

Skilled nursing focuses on patient self-management through blood pressure monitoring, medication education and reconciliation, diet, symptom tracking, and prevention strategies. Includes a comprehensive cardiac assessment.

### **Parkinson's Disease**

Skilled nursing focuses on both patient and family in the teaching of disease progression, coping strategies, self-management, symptom management, and medication education and reconciliation. Includes assessment for depression.
