

VAULT COMPUTER

100% Totally Secure Data

We offer the world's first and most secure production computers for sale to individuals, industry and governments.

www.thevaultpc.com

Information Access

- Vault Computers with Hardware Encryption will not boot without the code key
- This means the computer cannot be user hacked – there is no “foot in the door”
- You can now control who uses the computer and who sees the data on it

Theft

- If the computer is stolen or the hard drive is removed - information and data is NOT available
- The entire computer OS hard drive is encrypted and converted into a vault
- No forensic techniques can be applied and your data is secure from unwanted investigation
- The data is invisible, irretrievable, unbreakable and secure from unauthorized access – period

Software Infection and Internet Attacks

- You are protected with isolated storage, backup and cloned OS hard drives – See section: Protection against Ransomware, Malware and Viruses

Secure Data Storage

Everyone and every entity has information they want to keep private and protected. Vault Computers may be used for any type of secure data storage:

- Proprietary data

- Healthcare information/Medical data

- Evidence - Body Camera Video

- Classified data

- Industrial information, designs, CAD, etc.

- Business information, accounts, contracts, etc.

- Personal information, documents, photos, etc.

Whatever your business, healthcare, industrial or government needs are our team can provide you with a security solution. Most often a single computer fulfills basic security needs. For higher density security needs a Secure IP Plan design is appropriate to provide you with data security. This is available for download on the website. We put the power of security in your hands under your complete control.

US Government Security Compliant

All Vault Computers manufactured with the Encryption option utilize US Government level 256-bit AES encryption security. Additionally, we use CBC (Chain Blocking Cypher) AES above of the US Government accepted ECB type of AES encryption. This multiplies the already unbreakable strength 4 quadrillion times. Full CBC mode is only available with Vault Computer's Hardware Encryption.

CJIS Certified - Vault Computer is certified by the FBI's Criminal Justice Information System - We are certified to work with sensitive data. Our certificate is available upon request.

Hardware Encryption is new technology – All other encryption is software encryption and encrypts only part of the hard drive. This leaves clues and traces for hackers. Vault Computers encrypt the entire hard drive.

HIPAA Compliant

Vault Computer is a certified HIPAA Business Associate

HIPAA is the federal Health Insurance Portability and Accountability Act of 1996. While it isn't a new law it is being enforced more frequently and with increasing fines.

HIPAA is designed to protect individual's medical and related insurance records. All endpoint user workstations are subject to the law's security requirements. All Vault Computer models with the encryption option are fully HIPAA compliant.

For complete information about being HIPAA Compliant using Vault Computer's Hardware Encryption you may download the Vault Computer Secure Data IP Plan For Healthcare and Insurance on the website.

Protection against Ransomware, Malware and Viruses

- Vault Computers are equipped with Hotswap hard drives; storage and backup drives that can be started and stopped while the computer is operating.
- Information in Storage, Backups and Cloned Operating System copies can be kept offline and separated from potential infection.

If you are Infected or Attacked

- Shutdown your computer; deselect infected OS hard drive; select and restart computer on clean Cloned OS hard drive – you are operational again!
- **The Fix:** While operating on Cloned OS turn on infected hard drive, reformat it and clone the clean OS back to that drive; Clone time is ~ 6 minutes.
- Saves Time and Money from IT costs, lost production and business downtime.
- Any data can be easily restored from offline protected storage and backup drives due to infection, Internet attack or user error.

American Made

Almost all electronics today are foreign made. There are, however, a few exceptions. Vault Computer uses American parts and American companies whenever possible. We also attempt to use American owned distributors for sourcing.

We are proud to say that all Vault Computer models are manufactured, hand-built, inspected and tested, right here in America by Americans. We want to provide all our customers, both domestic and foreign, with the highest quality possible.

Vault Computer is also a Certified U.S. Military Disabled Veteran Owned Business.
