Xpress Flooring.....can you say, **Green?**

Epoxy Floor Coatings – A Durable, Cost Effective “Green Alternative”

If you want a dramatic improvement to your existing cracked, gray concrete floor; or want to replace a cracked, leaking quarry tile floor, then Quarry-Tek epoxy flooring is an excellent option. Not only is Quarry-Tek cost effective but it also meets several LEED requirements.

- The light reflecting qualities of solid epoxy floor surfaces (some estimates claim up to 300% more light reflectivity) means less lighting and less energy used providing monetary savings.
- Darker floor colors can help retain solar energy when heat retention is desired as part of a passive solar approach to energy conversation.
- Easy to clean with a mild PH detergent. No harsh degreasers or caustic cleaners are necessary. Easier on the environment.
- LEED compliant epoxy is 100% solids, has no odors (VOC), and has no off gassing.
- Using epoxy floor systems can eliminate the need for the removal or tear out of old floors reducing landfill waste. This is a significant environmental and financial bonus in terms of material savings, energy savings and labor costs as well as wise use of landfill facilities.
- Using natural marble stone from US quarries provides a safe, non toxic aggregate.
- In some cases material from old epoxy floors can be recycled and used as new floor aggregate.
- By manufacturing our own epoxy floor system and buying locally we have cut down on long distance shipping. This reduces the amount of petroleum used as well as reducing air contaminates from transport trucks.
- The longevity of our epoxy floors has been shown to be up to two times longer than other flooring products, providing an exceptional value. This breaks the cycle of removing, disposing of, and replacing floors as often.
