## HIGH INTENSITY DISCHARGE LAMPS

The catalog format and related terminology will assist the reader by providing brief description toward understanding of information in this section. The lamp identification is simplified by listing all the lamp families in ascending wattage and followed by alphabetical bulb designation. Tests conducted under controlled conditions on AC circuits with auxiliary equipment provides performance rating which meets current published ANSI specifications.

Typical service conditions may cause the variation of lamp performance against rated values. Ratings and specifications are subject to change without any further notice.

### ANSI CODE

ANSI CODE is a unique code developed and assigned by the American National Standards Institute. This code describes the class and electrical characteristics of lamps and ballast as well as fixture requirements. The ANSI CODE consists type of lamps as S=HPS, H=Mercury, M=Metal Halide, L=LPS and followed by ballast number. For metal halide lamps are followed by the fixture requirement (O, E, S, F).

### ARC LENGTH

The dimension of the arc discharge measured from one electrode tip to the other is called Arc length. It is useful for optical design of reflectors and effects fixture efficiency as well.

### AVERAGE LIFE (HOURS)

Average life is defined as the total operation hours at which 50% of any group of lamps is still under operation (There are exceptions for most High Pressure Sodium and Mercury Vapor lamps, which 65% of the lamps are operating at the end of the life). The average life of a lamp is based upon vertical operation of representative lamps operated under controlled conditions of at least 10 hours per start (Except MH1500 which based on 5 hours per start).

Following list shows the reduced lamp life caused by lamp operating cycles less than 10 hours per start.

- 5 hours/start ----- Approximately 75% of rating
- 2.5 hours/start ----- Approximately 55% of rating
- 1.25 hour/start ----- Approximately 40% of rating

Line voltage, and all the variations regarding lamp operation conditions such as bulb base or base temperatures could have an affect on lamp life. Regular operation lamp with off time less than 15 minutes will shorten lamp life.

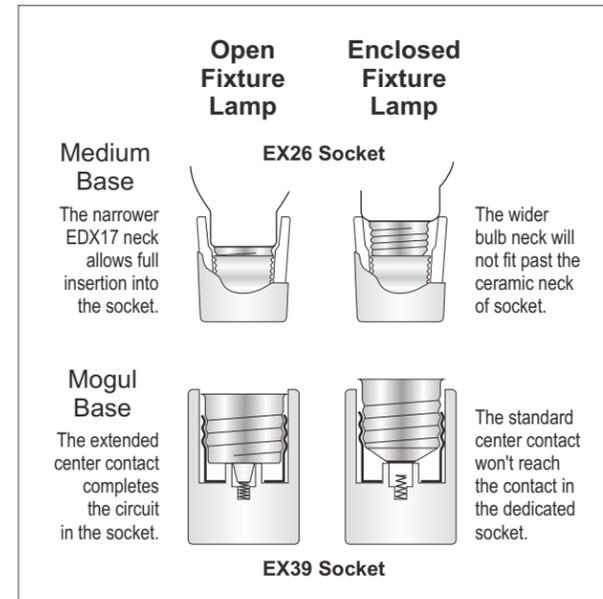

### BASE

**E26 Medium** - Medium (MED) bases are usually used on lamps in E17 bulbs and are limited to 200W maximum.

**E39 Mogul** - Mogul (MOG) bases are usually used on lamps in ED28 and bigger and are limited to 1500w.

**Ex39 Exclusionary Mogul Base** - Exclusionary Mogul bases (EX MOG) are bases used on metal halide lamps having shrouded arc tubes, Permitting them to be used in open fixture applications. These bases are compatible with exclusionary or standard mogul sockets.

**Rx7s / R7s Recessed Single Contact** - Plusrite double-ended HID lamps with recessed single contact (RSC) bases have silver plated contacts to provide maximum electrical contact.

### BULB

Glass enclosure contains chemical elements as lighting source. Each bulb description consists of both a letter to indicate bulb shape and number to show the maximum bulb diameter in 1/8 inches increments. For instance, BT37 bulb indicates a blown shape with tubular top, 37/8 of an inch or 4 5/8 inches in diameter.

Plusrite HID bulbs are made of glass designed to resist thermal shock in normal applications. They must be shielded from direct contact with liquids (such as rain) during operation to avoid bulb breakage.

### LIGHT CENTER LENGTH (LCL)

The light center length of HID lamps is a measurement from the center of the arc tube to the bottom of the lamp base.

### MAXIMUM OVERALL LENGTH (MOL)

The maximum overall length of single-ended lamps is the maximum distance from the top of the bulb to the bottom of the base. For double-ended lamps, it is the maximum distance from end-to-end (excluding any lead-wires).

### WARM UP TIME

Most HID lamps do not have instant on capabilities. It may take several minutes for the arc tube to stabilize before optimal light output is achieved.

### WATTS

A unit of electrical power which equal to 1 joule per second. Lamps are rated in watts to indicate power consumption.

### COLOR RENDERING INDEX (CRI)

Color Rendering Index (CRI) is an international scale (numbering system) up to 100 indicating the relative color rendering quality of a light source when compared to a standard reference light source of the same chromaticity (color temperature). The CRI expresses the degree to which colors will appear "familiar" or "natural" under the light source selected. In general, the higher the CRI number, the better the color rendering properties of the light source being measured. The color rendering index of any two like sources should only be compared if those sources have the same correlated color temperature (CCT).

Applications	CRI Range	Color Rendering Properties
Art Galleries	90-100	Excellent
Banks	70-80	Good
Car Dealerships	70-80	Good
Classrooms	70-80	Good
Grocery Stores	70-90	Good - Very Good
Hospitals	70-90	Good - Very Good
Manufacturing Areas	70-80	Good
Offices	70-80	Good
Parking Lot Lighting	<60-70	Poor
Printing Companies	90-100	Excellent
Restaurants	80-90	Good - Very Good
Retail Stores	80-100	Very Good - Excellent
Roadway Lighting	<60-70	Poor
Security Lighting	70-80	Good
Sporting Arenas	70-80	Good
Warehouses	<60-70	Poor

### CORRELATED COLOR TEMPERATURE (CCT)

The correlated color temperature of a light source, expressed in Kelvin (K), is a means of describing the appearance or chromaticity of the source. The correlated color temperature of the light source contributes to the visual appearance of the lighted space. "Warm" light sources have a low color temperature (2000-3000K) and feature more light in the red / orange / yellow range. Light with a higher color temperature (>4000K) features more blue and is referred to as "cool."

With new installations, or group relamps, all color performance evaluations should be made after at least 100 hours of operation (at recommended operating cycles) to allow the lamps to stabilize. Additional changes in chemistry within the arc tube over the life of the lamp may also cause the color temperature to shift as the lamp gets closer to the end of its rated life. To minimize color variation within an installation, it is recommended that HID lamps be group relamped and run on equal operating cycles.

Color Temperature	Common Color Description	Typical Applications
2700K - 3400K	Warm; Warm White	Specialty Retailers, Restaurants, Hotel Lobbies, Residential
3500K	Neutral; Neutral White	Grocery Stores & Produce Markets, Retail Stores, Bank Lobbies
4100K	Cool; Cool White	Offices, Manufacturing, Schools, Hospitals
5000K - 6500K	Daylight; Daylight Plus; Full Spectrum	Printers, Paint Studios, Art Galleries, Car Dealerships

### HOT RESTRIKE

In most instances, if an HID lamp experiences a momentary power interruption or sudden voltage drop, the lamp may extinguish. A lamp that is still hot will not restart immediately. Because the arc tube within the lamp must cool down before it can restart, HID lamps have hot restrike times ranging from 1-15 minutes depending on the product type.

### FIXTURE REQUIREMENT

Developed by the American National Standard institute (ANSI), the fixture requirement code describes the type of fixture required for each lamp type.

See lamp warnings for additional information and proper operating instructions.

**E** = Lamps classified as E-type are to be used ONLY in suitably rated enclosed luminaires.

**O** = Lamps classified as O-type, comply with ANSI Standard C78.387 for a containment testing and may be used in open luminaires.

**S** = When operated within 15 degrees of vertical, this lamp may be operated in an open luminaires provided the installation is not near people or flammable or combustible material, otherwise it must be operated in a suitably enclosed luminaires.

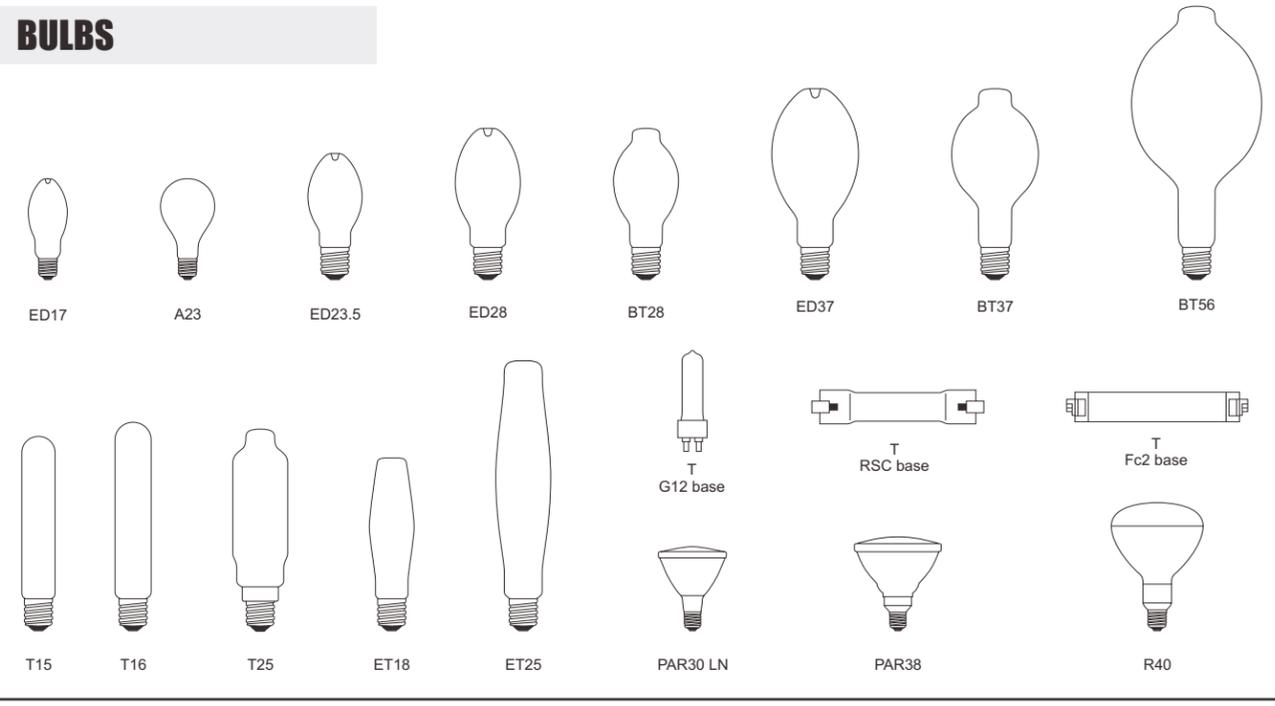

### LUMENS (lm)

A unit of luminous flux; overall light output; quantity of light, expressed in lumens. For example, a dinner candle provides about 12 lumens and 60-watt soft white incandescent lamp provides about 840 lumens.

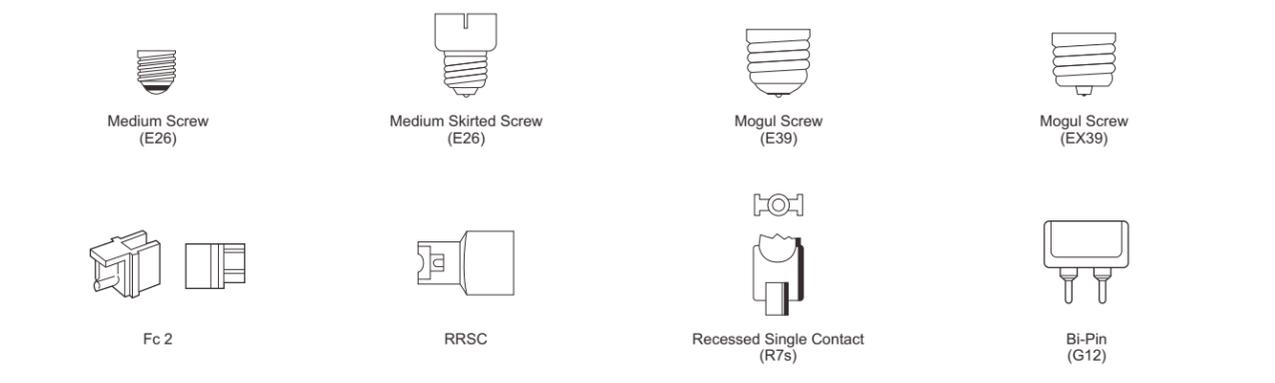

### LUMEN DEPRECIATION

The decrease in lumen output of a light source over time. Every lamp type has a unique lumen depreciation curve (sometimes called a lumen maintenance curve) depicting the pattern of decreasing light output.

## R ⚠ WARNING

### Enclosed fixture rated METAL HALIDE LAMP

#### ULTRAVIOLET RADIATION EXPOSURE:

WARNING: This lamp can cause serious skin burn and eye inflammation from short wave ultraviolet radiation if the outer envelope of the lamps is broken or punctured. Do not use where people will remain for more than a few minutes unless adequate shielding or other safety precautions are used. Lamps that will automatically extinguish when the outer envelope is broken or punctured are commercially available. This products conforms to the following federal regulations: U.S.A: 21 CFR 1040.30 and CANADA: SOR/80-381

1. Metal Halide lamps are constructed of an outer glass jacket and internal arc tube made of quartz. The arc tube operates under high pressure and temperatures as high as 1000°C (1832°F). The arc tube and outer jacket may unexpectedly rupture due to internal causes or external factors such as system malfunction or misapplication, creating a risk of personal injury, property damage, burns and fire. To reduce this risk the following instructions must be adhered to.
2. Do not operate lamps in excess of rated voltages of the ballast as this will increase lamp pressure and the possibility of shattering.
3. This lamp must be used only with proper circuit and auxiliary equipment and suitable ballast.
4. This lamp must be operated with a suitable fixture, ballast and igniter, which have an ANSI designation identical to the ANSI designation this catalog.
5. Do not use this lamp in a fixture designed for less than the rated lamp wattage.
6. Failure to comply may result in poor lamp performance and possible personal injury or property damages for which the manufacturer will not be held responsible.
7. Do not scratch glass of bulb or subject this lamp to undue pressure as either may cause lamp to break. Replace scratched, cracked, broken or damaged bulbs immediately.
8. The lamp should be screwed firmly, but not forcibly, into the socket to reduce the possibility of loosening due to vibration. Use of excessive force may result in lamp breakage.
9. Do not touch hot lamps with fingers, skin or any flammable material. Lamps may remain hot after being turned off.
10. This lamp must be shielded from direct contact with rain, sleet, snow and other liquids to reduce the possibility of breakage. This lamp may implode if broken. Use eye protection and gloves when handling this lamp.
11. The fixture for Metal Halide lamps must be enclosed. Enclosures must be made of suitable materials capable of withstanding the discharge of hot quartz, arc tube or glass particles up to 1000°C (1832°F). The manufacturer has identified only tempered glass as suitable lens or diffuser material. End users should contact the fixture manufacturer to determine if a particular enclosure is suitable.
12. In an continuously operating system (24 hours/day, 7 days/week), turn lamps off once per week for at least 1 hour. Failure to comply increases the risk of rupture.
13. When operating this lamp, the base temperature should not exceed 210°C (410°F) for Mogul base and 190°C (374°F) for Medium base, the outer envelope should not exceed 400°C (752°F). The recommended ambient temperature limit for this lamp is -40°C (-40°F) minimum; 40°C (104°F) maximum.
14. Do not use this lamp in a location subject to vibration or shock, unless an adequate vibration-proof fixture is used.
15. Do not use this lamp in a corrosive atmosphere unless an adequate corrosion resistant-fixture is used.
16. Replace lamp at or before the end of its rated life. Allowing lamps to burn until they fail may increase the risk of inner arc tube rupture.
17. Electrically insulate any metal support in contact with glass to reduce the possibility of decomposition of the glass.
18. Do not look directly at the lamp during operation to avoid eye inflammation from short wave ultraviolet radiation.
19. Do not paint the lamp to prevent its overheating or breakage.
20. Do not use this lamp in an ignitable atmosphere (for example gasoline, inflammable spray, thinner, lacquer, dust, etc.) to prevent a fire or explosion unless an adequate fixture is used.
21. Do not use this lamp in a powdery or dusty atmosphere in order to eliminate the overheating of the lamp unless an adequate fixture is used.
22. The radiation from this lamp may cause colored objects to fade unless an adequate fixture is used.
23. Follow all instructions in the manufacturer's catalog or on the individual box or instruction sheet.

# ⚠ WARNING

## Open fixture rated METAL HALIDE LAMP

### ULTRAVIOLET RADIATION EXPOSURE:

WARNING: This lamp can cause serious skin burn and eye inflammation from short wave ultraviolet radiation if the outer envelope of the lamps is broken or punctured. Do not use where people will remain for more than a few minutes unless adequate shielding or other safety precautions are used. Lamps that will automatically extinguish when the outer envelope is broken or punctured are commercially available. This products conforms to the following federal regulations: U.S.A: 21 CFR 1040.30 and CANADA: SOR/80-381

- 1.This lamp is intended for use in open fixtures since it contains a special shield which was designed to contain a ruptured arc tube and thereby minimize the resultant risks of personal injury, property damage, burns and fire. In applications where an additional measure of safety is desired, an enclosed fixture may be used with a lens/diffuser material able to contain hot lamp fragments (up to 2192°F, 1200°C for a ceramic arc tube and 2012°F, 1100°C for quartz). If you are uncertain, contact your fixture manufacturer.
- 2.Metal Halide lamps are constructed of an outer glass jacket and internal arc tube made of quartz. The arc tube operates under high pressure and temperatures as high as 1000°C (1832°F). The arc tube and outer jacket may unexpectedly rupture due to internal causes or external factors such as system malfunction or misapplication, creating a risk of personal injury, property damage, burns and fire. To reduce this risk the following instructions must be adhered to.
- 3.Do not operate lamps in excess of rated voltages of the ballast as this will increase lamp pressure and the possibility of shattering.
- 4.This lamp must be used only with proper circuit and auxiliary equipment and suitable ballast.
- 5.This lamp must be operated with a suitable fixture, ballast and igniter, which have an ANSI designation identical to the ANSI designation in this catalog.
- 6.Do not use this lamp in a fixture designed for less than the rated lamp wattage.
- 7.Failure to comply may result in poor lamp performance and possible personal injury or property damages for which the manufacturer will not be held responsible.
- 8.Do not scratch the glass of bulb or subject this lamp to undue pressure as either may cause the lamp to break. Replace scratched, cracked, broken or damaged bulbs immediately.
- 9.The lamp should be screwed firmly, but not forcibly, into the socket to reduce the possibility of loosening due to vibration. Use of excessive force may result in lamp breakage.
- 10.Do not touch hot lamps with fingers, skin or any flammable material. Lamps may remain hot after being turned off.
- 11.This lamp must be shielded from direct contact with rain, sleet, snow and other liquids to reduce the possibility of breakage. This lamp may implode if broken. Use eye protection and gloves when handling this lamp.
- 12.In an continuously operating system (24 hours/day, 7 days/week), turn lamps off once per week for at least 1 hour. Failure to comply increases the risk of rupture.
- 13.When operating this lamp, the base temperature should not exceed 210°C (410°F) for Mogul base and 190°C (374°F) for Medium base, the outer envelope should not exceed 400°C (752°F). The recommended ambient temperature limit for this lamp is -40°C (-40°F) minimum; 40°C (104°F) maximum.
- 14.Do not use this lamp in a location subject to vibration or shock, unless an adequate vibration-proof fixture is used.
- 15.Do not use this lamp in a corrosive atmosphere unless an adequate corrosion resistant-fixture is used.
- 16.Replace lamp at or before the end of its rated life. Allowing lamps to burn until they fail may increase the risk of inner arc tube rupture.
- 17.Electrically insulate any metal support in contact with glass to reduce the possibility of decomposition of the glass.
- 18.Do not look directly at the lamp during operation to avoid eye inflammation from short wave ultraviolet radiation.
- 19.Do not paint the lamp to prevent its overheating or breakage.
- 20.Do not use this lamp in an ignitable atmosphere (for example gasoline, inflammable spray, thinner, lacquer, dust, etc.) to prevent a fire or explosion unless an adequate fixture is used.
- 21.Do not use this lamp in a powdery or dusty atmosphere in order to eliminate the overheating of the lamp unless an adequate fixture is used.
- 22.The radiation from this lamp may cause colored objects to fade unless an adequate fixture is used.
- 23.Follow all instructions in the manufacturer's catalog or on the individual box or instruction sheet.

# R

# ⚠ WARNING

## Open/Enclosed fixture rated METAL HALIDE LAMP

### ULTRAVIOLET RADIATION EXPOSURE:

WARNING: This lamp can cause serious skin burn and eye inflammation from short wave ultraviolet radiation if the outer envelope of the lamps is broken or punctured. Do not use where people will remain for more than a few minutes unless adequate shielding or other safety precautions are used. Lamps that will automatically extinguish when the outer envelope is broken or punctured are commercially available. This products conforms to the following federal regulations: U.S.A: 21 CFR 1040.30 and CANADA: SOR/80-381

- 1.Only operate lamp in an enclosed fixture with a lens/diffuser material able to contain hot lamp fragments (up to 2012°F, 1100°C). If you are uncertain, contact your fixture manufacturer. When operated within 15° of vertical, this lamp may be operated in an open fixture PROVIDED THE INSTALLATION IS NOT NEAR PEOPLE OR FLAMMABLE OR COMBUSTIBLE MATERIAL.
- 2.Metal Halide lamps are constructed of an outer glass jacket and internal arc tube made of quartz. The arc tube operates under high pressure and temperatures as high as 1000°C (1832°F). The arc tube and outer jacket may unexpectedly rupture due to internal causes or external factors such as system malfunction or misapplication, creating a risk of personal injury, property damage, burns and fire. To reduce this risk the following instructions must be adhered to.
- 3.Do not operate lamps in excess of rated voltages of the ballast as this will increase lamp pressure and the possibility of shattering.
- 4.This lamp must be used only with proper circuit and auxiliary equipment and suitable ballast.
- 5.This lamp must be operated with a suitable fixture, ballast and igniter, which have an ANSI designation identical to the ANSI designation in this catalog.
- 6.Do not use this lamp in a fixture designed for less than the rated lamp wattage.
- 7.Failure to comply may result in poor lamp performance and possible personal injury or property damages for which the manufacturer will not be held responsible.
- 8.Do not scratch the glass of bulb or subject this lamp to undue pressure as either may cause the lamp to break. Replace scratched, cracked, broken or damaged bulbs immediately.
- 9.The lamp should be screwed firmly, but not forcibly, into the socket to reduce the possibility of loosening due to vibration. Use of excessive force may result in lamp breakage.
- 10.Do not touch hot lamps with fingers, skin or any flammable material. Lamps may remain hot after being turned off.
- 11.This lamp must be shielded from direct contact with rain, sleet, snow and other liquids to reduce the possibility of breakage. This lamp may implode if broken. Use eye protection and gloves when handling this lamp.
- 12.In an continuously operating system (24 hours/day, 7 days/week), turn lamps off once per week for at least 1 hour. Failure to comply increases the risk of rupture.
- 13.When operating this lamp, the base temperature should not exceed 210°C (410°F) for Mogul base and 190°C (374°F) for Medium base, the outer envelope should not exceed 400°C (752°F). The recommended ambient temperature limit for this lamp is -40°C (-40°F) minimum; 40°C (104°F) maximum.
- 14.Do not use this lamp in a location subject to vibration or shock, unless an adequate vibration-proof fixture is used.
- 15.Do not use this lamp in a corrosive atmosphere unless an adequate corrosion resistant-fixture is used.
- 16.Replace lamp at or before the end of its rated life. Allowing lamps to burn until they fail may increase the risk of inner arc tube rupture.
- 17.Electrically insulate any metal support in contact with glass to reduce the possibility of decomposition of the glass.
- 18.Do not look directly at the lamp during operation to avoid eye inflammation from short wave ultraviolet radiation.
- 19.Do not paint the lamp to prevent its overheating or breakage.
- 20.Do not use this lamp in an ignitable atmosphere (for example gasoline, inflammable spray, thinner, lacquer, dust, etc.) to prevent a fire or explosion unless an adequate fixture is used.
- 21.Do not use this lamp in a powdery or dusty atmosphere in order to eliminate the overheating of the lamp unless an adequate fixture is used.
- 22.The radiation from this lamp may cause colored objects to fade unless an adequate fixture is used.
- 23.Follow all instructions in the manufacturer's catalog or on the individual box or instruction sheet.

## HIGH PRESSURE SODIUM LAMPS

**R**

**WARNING**

#### ULTRAVIOLET RADIATION EXPOSURE:

WARNING: This lamp can cause serious skin burn and eye inflammation from short wave ultraviolet radiation if the outer envelope of the lamps is broken or punctured. Do not use where people will remain for more than a few minutes unless adequate shielding or other safety precautions are used. Lamps that will automatically extinguish when the outer envelope is broken or punctured are commercially available. This products conforms to the following federal regulations: U.S.A: 21 CFR 1040.30 and CANADA: SOR/80-381

1. This lamp is intended for use in open fixtures since it contains a special shield which was designed to contain a ruptured arc tube and thereby minimize the resultant risks of personal injury, property damage, burns and fire. In applications where an additional measure of safety is desired, an enclosed fixture may be used with a lens/diffuser material able to contain hot lamp fragments (up to 2192°F, 1200°C for a ceramic arc tube and 2012°F, 1100°C for quartz). If you are uncertain, contact your fixture manufacturer.
2. Metal Halide lamps are constructed of an outer glass jacket and internal arc tube made of quartz. The arc tube operates under high pressure and temperatures as high as 1000°C (1832°F). The arc tube and outer jacket may unexpectedly rupture due to internal causes or external factors such as system malfunction or misapplication, creating a risk of personal injury, property damage, burns and fire. To reduce this risk the following instructions must be adhered to.
3. Do not operate lamps in excess of rated voltages of the ballast as this will increase lamp pressure and the possibility of shattering.
4. This lamp must be used only with proper circuit and auxiliary equipment and suitable ballast.
5. This lamp must be operated with a suitable fixture, ballast and igniter, which have an ANSI designation identical to the ANSI designation in this catalog.
6. Do not use this lamp in a fixture designed for less than the rated lamp wattage.
7. Failure to comply may result in poor lamp performance and possible personal injury or property damages for which the manufacturer will not be held responsible.
8. Do not scratch the glass of bulb or subject this lamp to undue pressure as either may cause the lamp to break. Replace scratched, cracked, broken or damaged bulbs immediately.
9. The lamp should be screwed firmly, but not forcibly, into the socket to reduce the possibility of loosening due to vibration. Use of excessive force may result in lamp breakage.
10. Do not touch hot lamps with fingers, skin or any flammable material. Lamps may remain hot after being turned off.
11. This lamp must be shielded from direct contact with rain, sleet, snow and other liquids to reduce the possibility of breakage. This lamp may implode if broken. Use eye protection and gloves when handling this lamp.
12. In an continuously operating system (24 hours/day, 7 days/week), turn lamps off once per week for at least 1 hour. Failure to comply increases the risk of rupture.
13. When operating this lamp, the base temperature should not exceed 210°C (410°F) for Mogul base and 190°C (374°F) for Medium base, the outer envelope should not exceed 400°C (752°F). The recommended ambient temperature limit for this lamp is -40°C (-40°F) minimum; 40°C (104°F) maximum.
14. Do not use this lamp in a location subject to vibration or shock, unless an adequate vibration-proof fixture is used.
15. Do not use this lamp in a corrosive atmosphere unless an adequate corrosion resistant-fixture is used.
16. Replace lamp at or before the end of its rated life. Allowing lamps to burn until they fail may increase the risk of inner arc tube rupture.
17. Electrically insulate any metal support in contact with glass to reduce the possibility of decomposition of the glass.
18. Do not look directly at the lamp during operation to avoid eye inflammation from short wave ultraviolet radiation.
19. Do not paint the lamp to prevent its overheating or breakage.
20. Do not use this lamp in an ignitable atmosphere (for example gasoline, inflammable spray, thinner, lacquer, dust, etc.) to prevent a fire or explosion unless an adequate fixture is used.
21. Do not use this lamp in a powdery or dusty atmosphere in order to eliminate the overheating of the lamp unless an adequate fixture is used.
22. The radiation from this lamp may cause colored objects to fade unless an adequate fixture is used.
23. Follow all instructions in the manufacturer's catalog or on the individual box or instruction sheet.
