to fill out their  
application!

# TOMORROW'S LEADERS

IN CARDIOVASCULAR MEDICINE COULD BE  
SITTING IN YOUR CLASSROOMS TODAY.

Give them the head start they deserve.  
**Encourage them to apply for the American  
College of Cardiology Young Scholars Program.**

This program is designed to provide promising young students of all backgrounds with the opportunity to learn more about different cardiology disciplines and potential careers in the field, and the opportunity to learn the basics of investigational research.

Twenty students will be selected to participate in a **year of mentorship and growth in investigational research**. The program kicks off at the opening day of the ACC Annual Scientific Session.

At the conference, students will:

- Be paired with an ACC member who will act as their guide to the conference
- Take part in a focused lecture series outlining the basics of research and science in cardiology
- Attend the Opening Showcase Session and late-breaking clinical trials
- Explore the expo hall and watch as young scientists present their research abstracts

**ALL Young Scholars will be paired with a mentor for one year**, during which they will work on a research project suitable for their level of training. Mentors will also provide guidance, advice and support to the students regarding career options within the field of medicine and cardiology.

This Mentored Year of Research and Learning will also allow students to attend scheduled webinars to gain additional knowledge about cardiovascular disease and cardiovascular research techniques.
