Introduction

Overview

Category 2 consists of four types of messages exchanged between and on behalf of financial institutions. These are:

- financial institution transfers, which are orders for the movement of funds, originated by a financial institution, in favour of itself or another financial institution.
- notice to receive, which notifies a financial institution of funds which are to be received for the Sender's account.
- payment messages issued by financial institutions to claim funds from SWIFT member banks.
- cheque truncation messages, to debit, obtain credit or inform of non-payment of truncated cheques.

The messages in this category deal with payments, or information about payments, in which all parties in the transaction are financial institutions.

Changes

This volume incorporates the following changes to Category 2 - Financial Institution Transfers as noted in the *Standards Release Guide (SRG) 2017* and the relevant updates to the SRG 2017:

- Field 72 in MT 202, MT 202 COV, MT 203, MT 205, MT 205 COV: A usage rule is added to ensure that all banks involved in the transaction pass all relevant information to the beneficiary bank and that integrity can be ensured throughout the payment chain.
- MT 207 and MT 256 are removed.

SWIFT continually applies editorial enhancements to its documentation to improve quality and ensure consistency. These changes are not published but are controlled in order to ensure that they have no impact on FIN validation.

IMPORTANT: This volume contains information effective as of the November 2017 Standards Release. Therefore the 22 July 2016 edition of the Standards MT User Handbook volumes remains effective until November 2017.

Volume Formatting Explanation

This volume of the Standards User Handbook set contains general information about the category and a detailed description of each message type which is currently available for use. For each message type, the following information is provided:

Message Type Scope

The scope specifies the Sender and Receiver of the message and provides an explanation on how the message is used. In some messages, an example of the message flow is also provided.

Message Type Format Specifications

The format specifications are the rules for the layout of the message type. This information is provided in table form with the following information:

MT nnn (Message Type Name)

Status	Tag	Field Name	Content/Options	No.
M	20	Transaction Reference Number	16x	1
M	21	Related Reference	16x	2
Mandatory Sequence A (Sequence Name)				
M	25	Account Identification	35x	3
M	32a	Value Date, Currency Code, Amount	C or D	4
-----> Optional Repetitive Sequence B (Sequence Name)				
O	52a	Ordering Institution	A or D	5
M	71B	Details of Charges	6*35x	6
O	72	Sender to Receiver Information	6*35x	7

M = Mandatory O = Optional - Network Validated Rules may apply				

- **MT nnn (Message Type Name)** provides the message type number and name
- **Status** indicates if the field is
 - **M** = Mandatory
 - **O** = Optional - Network Validated Rules may apply

The status **M** for fields in optional (sub)sequences means that the field must be present if the (sub)sequence is present and is otherwise not allowed.

- **Tag** is the field identification.
- **Field Name** is the detailed name of the field tag, for this message type.
- **Content/Options** provides permitted field length and characteristics. For information concerning field structure, notation and character restrictions, see the *Standards MT General Information*.
- **No.** identifies the number of the field in the Field Specifications for the message type.

Some messages are separated into sequences of fields, as shown above. An arrow indicates that a sequence of fields may be repeated.

MT Network Validated Rules

Network validated rules are validated on the network, that is, rules for which an error code is defined. Rules specified in this section affect more than one field in the message, placing a **condition** on one of the fields specified. They are identified as **Cn**, or conditional rules.

MT Usage Rules

Usage rules are not validated on the network, that is, rules for which no error code is defined, but are nevertheless mandatory for the correct usage of the message. Rules specified in this section affect more than one field in the message, or more than one SWIFT message.

MT Guidelines

Guidelines are not validated on the network and are not mandatory for the correct usage of the message. They concern good practices. Guidelines specified in this section affect more than one field in the message, or more than one SWIFT message.

MT Field Specifications

The rules for the use of each field in the message are specified in this section. Each field is identified by its index number (as shown in the **No.** column of the MT Format Specifications), field tag and detailed field name, followed by a description of the field, which may contain some or all of the following:

- **FORMAT** specifies the field formats which are allowed for the field.
- **PRESENCE** indicates if the field is mandatory, optional or conditional in its sequence.
- **DEFINITION** specifies the definition of the field in the message type.
- **CODES** lists all codes available for use in the field. If there is more than one subfield for which codes are defined, each separate code list will be identified with a **CODES** heading. When a list of codes is validated by the network, the error code will be specified.
- **NETWORK VALIDATED RULES** specifies rules that are validated on the network, that is, rules for which an error code is defined. Generally, rules specified in this section affect only the field in which they appear. In some cases, rules which are validated at the message level, that is, rules which affect more than one field, are repeated in this section. This is the case when the rule does not affect the presence of the field, but information within several fields, for example, a currency which must be the same for more than one field in the message.
- **USAGE RULES** specifies rules that are not validated on the network, that is, rules for which no error code is defined, but are nevertheless mandatory for the correct usage of the field. Rules specified in this section affect only the field in which they appear.
- **MARKET PRACTICE RULES** specifies rules published by the Payments Market Practice Group (PMPG). It informs the reader of the existence of a global market practice document on the business process in which the concerned field is used. The absence of a market practice rule notation does not mean that no market practices exist for the concerned field. The presence of a market practice rule is merely an indicator of a known market practice. Furthermore, readers should be aware that in addition to global market practices there may also be country specific requirements that should be considered when using the field. For more details on PMPG market practice documentation, refer to **www.pmpg.info**.
- **EXAMPLES** provides one or more examples of the field as it will be formatted/used.

MT Mapping

MT mapping provides an explanation of how to map the fields of the message into another SWIFT message, either of the same or a different message type.

MT Examples

Examples are provided to illustrate the correct use of a message. Examples always include the following information:

- **Narrative** provides a brief description of a transaction
- **Information Flow** illustrates the relationships between the parties involved in the message. An explanation of the flow diagram can be found in the *Standards MT General Information*.
- **SWIFT Format** provides the message using the defined SWIFT format, and providing an explanation, where necessary, of the fields which have been used.

Category 2 Message Types

The following table lists all message types defined in category 2.

For each message type, there is a short description, an indicator whether the message type is signed (Y/N), the maximum message length on input (2,000 or 10,000 characters), whether the use of the message requires registration with SWIFT for use in a message user group (Y/N) and whether value date ordering (VDO) can be requested for the message (Y/N). Value date ordering criteria are described in the *Standards MT General Information*.

(2) Special registration is needed for the MT 204 - see the FIN Service Description for details.

Note: A Message User Group (MUG), for the purposes of this book, is a group of users who have voluntarily agreed to support the specified message type and have registered with SWIFT to send or receive the specified message type. These messages are indicated in the preceding table in the column MUG.

Registration is free of charge. To register to use one or more message types, submit a registration request (**Order Message User Group**) through the forms available on www.swift.com > Ordering

It is strongly recommended to use the standard codes. However, where bilateral agreements covering the use of codes in this field are in effect, the code must conform to the structure of this field.

Use of field 72, particularly with uncoded instructions, may cause delay, because in automated systems, the presence of this field will normally require manual intervention.

NETWORK VALIDATED RULES

Identifier Code must be a registered financial institution BIC (Error code(s): T27,T28,T29,T45).

Identifier Code must be a financial institution BIC. This error code applies to all types of BICs referenced in a FIN message including connected BICs, non-connected BICs, Masters, Synonyms, Live destinations and Test & Training destinations (Error code(s): C05).

USAGE RULES

When the Sender of an initial MT 202 is also the ordering institution, that is, this field is not used, that Sender will be identified in this field in any subsequent messages as the ordering institution.

This field must be forwarded to the beneficiary institution.

The coded information contained in field 52a must be meaningful to the Receiver of the message.

Option A is the preferred option.

Option D should only be used when the ordering financial institution has no BIC.

6. Field 53a: Sender's Correspondent

DEFINITION

This field specifies the account or branch of the Sender or another financial institution through which the Sender will reimburse the Receiver.

NETWORK VALIDATED RULES

Identifier Code must be a registered financial institution BIC (Error code(s): T27,T28,T29,T45).

Identifier Code must be a financial institution BIC. This error code applies to all types of BICs referenced in a FIN message including connected BICs, non-connected BICs, Masters, Synonyms, Live destinations and Test & Training destinations (Error code(s): C05).

USAGE RULES

When the Sender instructs the Receiver to transfer funds between two accounts owned by the Sender and serviced by the Receiver, this field must be used with option B to identify the account to be debited.

In those cases where there are multiple direct account relationships, in the currency of the transaction, between the Sender and the Receiver, and one of these accounts is to be used for reimbursement, the account to be credited or debited must be indicated in field 53a, using option B with the party identifier only.

If there is no direct account relationship, in the currency of the transaction, between the Sender and the Receiver (or branch of the Receiver when specified in field 54a), then field 53a must be

present.

When field 53a is present and contains a branch of the Sender, the need for a cover message is dependent on the currency of the transaction, the relationship between the Sender and the Receiver and the contents of field 54a, if present.

A branch of the Receiver may appear in field 53a if the financial institution providing reimbursement is both the Sender's correspondent and a branch of the Receiver, and the Sender intends to send a cover message to the branch of the Receiver. In this case, the Receiver will be paid by its branch in field 53a.

In all other cases, when field 53a is present, a cover message, that is, MT 202/203 or equivalent non-SWIFT, must be sent to the financial institution identified in field 53a.

When field 53B is used to specify a branch city name, it must always be a branch of the Sender.

The absence of fields 53a and 54a implies that the single direct account relationship between the Sender and Receiver, in the currency of the transfer, will be used.

The use and interpretation of fields 53a and 54a is, in all cases, dictated by the currency of the transaction and the correspondent relationship between the Sender and the Receiver relative to that currency.

7. Field 54a: Receiver's Correspondent

DEFINITION

This field specifies the branch of the Receiver or another financial institution at which the funds will be made available to the Receiver.

NETWORK VALIDATED RULES

Identifier Code must be a registered financial institution BIC (Error code(s): T27,T28,T29,T45).

Identifier Code must be a financial institution BIC. This error code applies to all types of BICs referenced in a FIN message including connected BICs, non-connected BICs, Masters, Synonyms, Live destinations and Test & Training destinations (Error code(s): C05).

USAGE RULES

The absence of fields 53a and/or 54a implies that the single direct account relationship between the Sender and Receiver, in the currency of the transfer, will be used.

In those cases where field 54a contains a branch of the Receiver, and is not preceded by field 53a, or field 53a contains an account of the Sender serviced by the Receiver's branch, the Receiver will claim reimbursement from its branch.

If field 54a contains a branch of the Receiver and field 53a contains a branch of the Sender, the Receiver will claim reimbursement from its branch or will be paid by its branch, depending on the currency of the transfer and the relationship between the Sender and the Receiver.

In all other cases where field 54a contains a branch of the Receiver, the Receiver will be paid by its branch in field 54a.

A branch of the Sender must not appear in field 54a.

If the branch of the Sender or other financial institution specified in field 53a is also the account servicer for the Receiver, field 54a must not be present.

Field 54a containing the name of a financial institution other than the Receiver's branch must be preceded by field 53a; the Receiver will be paid by the financial institution in field 54a.

The use and interpretation of fields 53a and 54a is in all cases dictated by the currency of the transaction and the correspondent relationship between the Sender and the Receiver relative to that currency.

USAGE RULES

Field 72 must never be used for information for which another field is intended.

Each item of information contained in this field must be preceded by a code which specifically indicates the party for which it is intended.

Codes must be placed between slashes and at the beginning of a line. Additional explanatory information, which may be continued on the next lines, is preceded by a double slash '//'.

Narrative text that is not qualified by a code, must start with a double slash '/' on a new line, and, should preferably be the last information in this field.

It is strongly recommended to use the standard codes. However, where bilateral agreements covering the use of codes in this field are in effect, the code must conform to the structure of this field.

Use of field 72, particularly with uncoded instructions, may cause delay, because in automated systems, the presence of this field will normally require manual intervention.

This field may contain ERI to transport dual currencies, as specified in the chapter entitled "Euro-Related Information (ERI)" in the *Standards MT General Information*.

In order to comply with the EC-directive on cross border credit transfers, the optional code word EXCH may be used to transport an exchange rate. In line with ERI, the code word EXCH is placed between slashes, followed by the exchange rate, format 12d, and terminated with another slash.

The code INS may be repeated to specify all previously involved financial institutions in the transaction chain.

Instructing institutions should be indicated in the order in which they were involved in the transaction chain, that is, the first occurrence specifies the financial institution that received the instruction from the ordering institution and passed it on to the next institution in the transaction chain; the last occurrence always indicates the institution that instructed the sender of this message to execute the transaction.

If codes INS, ACC, or BNF are present in field 72 of a received message, then these codes and the related details must be passed, unchanged, in field 72 of the subsequent message in the payment chain. Additional codes and details may be added to field 72 of the subsequent message but the original INS, ACC and BNF and related details must not be altered or removed.

MT 202 Examples

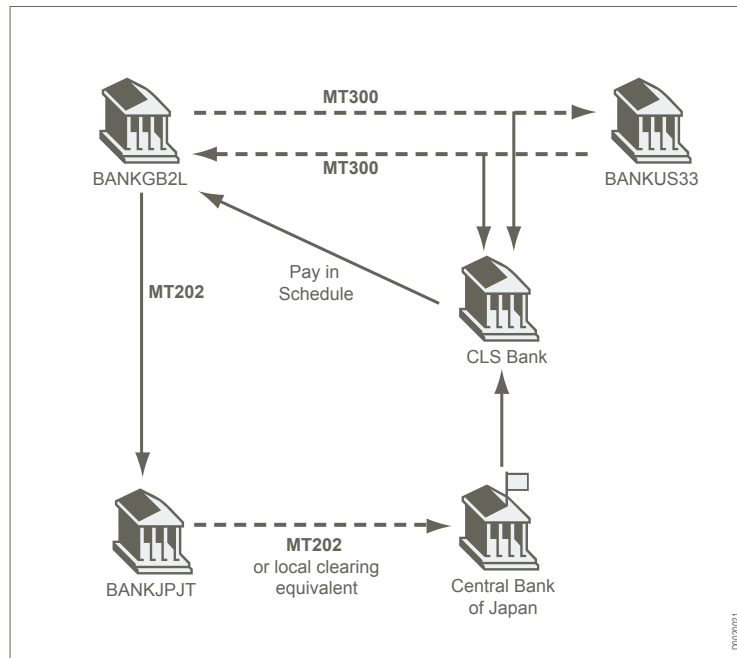

Example 1: MT 202 with Time Indication

Narrative

On 5 January, a CLS settlement member (BANKGB2L) receives an instruction from CLS Bank to fund JPY 5,000,000 by 07.00 AM CET to CLS Bank.

BANKGB2L sends an MT 202 to their JPY nostro correspondent (BANKJPJT), indicating that the funds need to be credited to CLS Bank by 07.00 AM CET.

Information Flow

SWIFT Message

In the MT 202 which BANKGB2L sends to its JPY correspondent BANKJPJT, it can indicate the time by which BANKJPJT has to credit the funds to CLS bank as follows: :13C:/CLSTIME/0700+0100

whereby

- 0700 is the time by which the funds have to be credited to CLS Bank. By convention CLS time instructions are quoted in CET.
- +0100 is the offset (during wintertime) of CET against UTC.

Upon receipt of the MT 202, BANKJPJT can recalculate the CET time indication into its local time by comparing the offset in 13C to its own offset against UTC. Japan is UTC +0900, therefore BANKJPJT knows it has to process the instruction before 15.00 local time in Japan.

Offsets of local delta time zones against UTC are published in the BIC Directory download file (TZ***.txt file), which is available on www.swiftrefdata.com.

PRESENCE

Optional in mandatory sequence A

DEFINITION

This repetitive field specifies one or several time indication(s) related to the processing of the payment instruction.

CODES

One of the following codes may be used in Code, placed between slashes ('/')

CLSTIME	CLS Time	The time by which the funding payment must be credited, with confirmation, to the CLS Bank's account at the central bank, expressed in Central European Time (CET).
RNCTIME	Receive Time	The time at which a TARGET2 payment was credited at the receiving central bank, expressed in Central European Time (CET).
SNDDTIME	Send Time	The time at which a TARGET2 payment was debited at the sending central bank, expressed in Central European Time (CET).

CODES

One of the following codes must be used in Sign (Error code(s): T15):

+	Plus	The + sign.
-	Minus	The - sign.

NETWORK VALIDATED RULES

Time indication must be a valid time expressed as HHMM (Error code(s): T38).

Time offset is expressed as 'HHMM', where the hour component, that is, 'HH', must be in the range of 00 through 13, and the minute component, that is, 'MM', must be in the range of 00 through 59. Any 'HH' or 'MM' component outside of these range checks will be disallowed (Error code(s): T16).

USAGE RULES

The time zone in which Time is expressed is to be identified by means of the offset against the UTC (Coordinated Universal Time - ISO 8601).

EXAMPLE

Assume a financial institution in London is sending a payment instruction on 5 January related to CLS in which it indicates that money has to be funded to CLS bank by 09.15 CET.

Time indication field will be completed as follows: :13C:/CLSTIME/0915+0100

Explanation:

- 0915 is the time by which the money has to be funded to CLS bank. It has been agreed that CLSTIME is to be indicated in CET (see codes above).
- +0100 is the offset of CET against UTC in January (that is during winter time).

If the same instruction had been sent on 10 June (that is during summer time), time indication field would have been completed as follows:

:13C:/CLSTIME/0915+0200

Offsets of local time zones against UTC are published in the BIC Directory download file (TZ***.txt file), which is available on www.swiftrefdata.com.

USAGE RULES

When the Sender of an initial MT 202 COV is also the ordering institution, that is, this field is not used, that Sender will be identified in this field in any subsequent messages as the ordering institution.

This field must be forwarded to the beneficiary institution.

The coded information contained in field 52a must be meaningful to the Receiver of the message.

Option A is the preferred option.

Option D should only be used when the ordering financial institution has no BIC.

6. Field 53a: Sender's Correspondent

FORMAT

Option A	[/1!a]/[34x] 4!a2!a2!c[3!c]	(Party Identifier) (Identifier Code)
Option B	[/1!a]/[34x] [35x]	(Party Identifier) (Location)
Option D	[/1!a]/[34x] 4*35x	(Party Identifier) (Name and Address)

PRESENCE

Optional in mandatory sequence A

DEFINITION

This field specifies the account or branch of the Sender or another financial institution through which the Sender will reimburse the Receiver.

NETWORK VALIDATED RULES

Identifier Code must be a registered financial institution BIC (Error code(s): T27,T28,T29,T45).

Identifier Code must be a financial institution BIC. This error code applies to all types of BICs referenced in a FIN message including connected BICs, non-connected BICs, Masters, Synonyms, Live destinations and Test & Training destinations (Error code(s): C05).

USAGE RULES

When the Sender instructs the Receiver to transfer funds between two accounts owned by the Sender and serviced by the Receiver, this field must be used with option B to identify the account to be debited.

In those cases where there are multiple direct account relationships, in the currency of the transaction, between the Sender and the Receiver, and one of these accounts is to be used for reimbursement, the account to be credited or debited must be indicated in field 53a, using option B with the party identifier only.

If there is no direct account relationship, in the currency of the transaction, between the Sender and the Receiver (or branch of the Receiver when specified in field 54a), then field 53a must be present.

When field 53a is present and contains a branch of the Sender, the need for a cover message is dependent on the currency of the transaction, the relationship between the Sender and the Receiver and the contents of field 54a, if present.

A branch of the Receiver may appear in field 53a if the financial institution providing reimbursement is both the Sender's correspondent and a branch of the Receiver, and the Sender intends to send a

cover message to the branch of the Receiver. In this case, the Receiver will be paid by its branch in field 53a.

In all other cases, when field 53a is present, a cover message, that is, MT 202 COV or equivalent non-SWIFT, must be sent to the financial institution identified in field 53a.

When field 53B is used to specify a branch city name, it must always be a branch of the Sender.

The absence of fields 53a and 54a implies that the single direct account relationship between the Sender and Receiver, in the currency of the transfer, will be used.

The use and interpretation of fields 53a and 54a is, in all cases, dictated by the currency of the transaction and the correspondent relationship between the Sender and the Receiver relative to that currency.

7. Field 54a: Receiver's Correspondent

FORMAT

Option A	[/1!a]/[34x] 4!a2!a2!c[3!c]	(Party Identifier) (Identifier Code)
Option B	[/1!a]/[34x] [35x]	(Party Identifier) (Location)
Option D	[/1!a]/[34x] 4*35x	(Party Identifier) (Name and Address)

PRESENCE

Optional in mandatory sequence A

DEFINITION

This field specifies the branch of the Receiver or another financial institution at which the funds will be made available to the Receiver.

NETWORK VALIDATED RULES

Identifier Code must be a registered financial institution BIC (Error code(s): T27,T28,T29,T45).

Identifier Code must be a financial institution BIC. This error code applies to all types of BICs referenced in a FIN message including connected BICs, non-connected BICs, Masters, Synonyms, Live destinations and Test & Training destinations (Error code(s): C05).

USAGE RULES

The absence of fields 53a and/or 54a implies that the single direct account relationship between the Sender and Receiver, in the currency of the transfer, will be used.

In those cases where field 54a contains a branch of the Receiver, and is not preceded by field 53a, or field 53a contains an account of the Sender serviced by the Receiver's branch, the Receiver will claim reimbursement from its branch.

If field 54a contains a branch of the Receiver and field 53a contains a branch of the Sender, the Receiver will claim reimbursement from its branch or will be paid by its branch, depending on the currency of the transfer and the relationship between the Sender and the Receiver.

In all other cases where field 54a contains a branch of the Receiver, the Receiver will be paid by its branch in field 54a.

A branch of the Sender must not appear in field 54a.

If the branch of the Sender or other financial institution specified in field 53a is also the account servicer for the Receiver, field 54a must not be present.

Field 54a containing the name of a financial institution other than the Receiver's branch must be preceded by field 53a; the Receiver will be paid by the financial institution in field 54a.

The use and interpretation of fields 53a and 54a is in all cases dictated by the currency of the transaction and the correspondent relationship between the Sender and the Receiver relative to that currency.

8. Field 56a: Intermediary

FORMAT

USAGE RULES

Field 72 must never be used for information for which another field is intended.

Each item of information contained in this field must be preceded by a code which specifically indicates the party for which it is intended.

Codes must be placed between slashes and at the beginning of a line. Additional explanatory information, which may be continued on the next lines, is preceded by a double slash '//'.

Narrative text that is not qualified by a code, must start with a double slash '/' on a new line, and, should preferably be the last information in this field.

It is strongly recommended to use the standard codes. However, where bilateral agreements covering the use of codes in this field are in effect, the code must conform to the structure of this field.

Use of field 72, particularly with uncoded instructions, may cause delay, because in automated systems, the presence of this field will normally require manual intervention.

This field may contain ERI to transport dual currencies, as specified in the chapter entitled "Euro-Related Information (ERI)" in the *Standards MT General Information*.

In order to comply with the EC-directive on cross border credit transfers, the optional code word EXCH may be used to transport an exchange rate. In line with ERI, the code word EXCH is placed between slashes, followed by the exchange rate, format 12d, and terminated with another slash.

Instructing institutions should be indicated in the order in which they were involved in the transaction chain, that is, the first occurrence specifies the financial institution that received the instruction from the ordering institution and passed it on to the next institution in the transaction chain; the last occurrence always indicates the institution that instructed the sender of this message to execute the transaction.

If codes INS, ACC, or BNF are present in field 72 of a received message, then these codes and the related details must be passed, unchanged, in field 72 of the subsequent message in the payment chain. Additional codes and details may be added to field 72 of the subsequent message but the original INS, ACC and BNF and related details must not be altered or removed.

NETWORK VALIDATED RULES

Identifier Code must be a registered financial institution BIC (Error code(s): T27,T28,T29,T45).

Identifier Code must be a financial institution BIC. This error code applies to all types of BICs referenced in a FIN message including connected BICs, non-connected BICs, Masters, Synonyms, Live destinations and Test & Training destinations (Error code(s): C05).

USAGE RULES

When the Sender of an initial MT 203 message is also the ordering institution that is, this field is not used, that Sender will be identified in this field in any subsequent messages as the ordering institution.

This field must be forwarded to each beneficiary institution.

The coded information contained in field 52a must be meaningful to the Receiver of the message.

Option A is the preferred option.

Option D should only be used when the ordering financial institution has no BIC.

4. Field 53a: Sender's Correspondent

FORMAT

Option A	[/1!a]/[34x] 4!a2!a2!c[3!c]	(Party Identifier) (Identifier Code)
Option B	[/1!a]/[34x] [35x]	(Party Identifier) (Location)
Option D	[/1!a]/[34x] 4*35x	(Party Identifier) (Name and Address)

PRESENCE

Optional

DEFINITION

This field specifies the account or branch of the Sender or another financial institution through which the Sender will reimburse the Receiver.

NETWORK VALIDATED RULES

Identifier Code must be a registered financial institution BIC (Error code(s): T27,T28,T29,T45).

Identifier Code must be a financial institution BIC. This error code applies to all types of BICs referenced in a FIN message including connected BICs, non-connected BICs, Masters, Synonyms, Live destinations and Test & Training destinations (Error code(s): C05).

USAGE RULES

When the Sender instructs the Receiver to transfer funds between two accounts owned by the Sender and serviced by the Receiver, this field must be used with option B to identify the account to be debited.

The absence of fields 53a and/or 54a implies that the single direct account relationship between the Sender and Receiver, in the currency of the transfer, will be used.

In those cases where there are multiple direct account relationships, in the currency of the transaction, between the Sender and the Receiver, and one of these accounts is to be used for reimbursement, the account to be credited or debited must be indicated in field 53a, using option B with the party identifier only.

If there is no direct account relationship, in the currency of the transaction, between the Sender and the Receiver (or branch of the Receiver when specified in field 54a), then field 53a must be present.

When field 53a is present and contains a branch of the Sender, the need for a cover message is dependent on the currency of the transaction, the relationship between the Sender and the Receiver and the contents of field 54a, if present.

A branch of the Receiver may appear in field 53a if the financial institution providing reimbursement is both the Sender's Correspondent and a branch of the Receiver, and the Sender intends to send a cover message to the branch of the Receiver. In this case, the Receiver will be paid by its branch in field 53a.

In all other cases, when field 53a is present, a cover message, that is, MT202/203 or equivalent non-SWIFT, must be sent to the financial institution identified in field 53a.

When field 53B is used to specify a branch city name, it must always be a branch of the Sender.

The use and interpretation of fields 53a and 54a is, in all cases, dictated by the currency of the transaction and the correspondent relationship between the Sender and Receiver relative to that currency.

5. Field 54a: Receiver's Correspondent

FORMAT

Option A	[/1!a]/[34x] 4!a2!a2!c[3!c]	(Party Identifier) (Identifier Code)
Option B	[/1!a]/[34x] [35x]	(Party Identifier) (Location)
Option D	[/1!a]/[34x] 4*35x	(Party Identifier) (Name and Address)

DEFINITION

This field specifies the branch of the Receiver or another financial institution at which the funds will be made available to the Receiver.

NETWORK VALIDATED RULES

Identifier Code must be a registered financial institution BIC (Error code(s): T27,T28,T29,T45).

Identifier Code must be a financial institution BIC. This error code applies to all types of BICs referenced in a FIN message including connected BICs, non-connected BICs, Masters, Synonyms, Live destinations and Test & Training destinations (Error code(s): C05).

USAGE RULES

The absence of fields 53a and/or 54a implies that the single direct account relationship between the Sender and Receiver, in the currency of the transfer, will be used.

In those cases where field 54a contains a branch of the Receiver, and is not preceded by field 53a, or field 53a contains an account of the Sender serviced by the Receiver's branch, the Receiver will claim reimbursement from its branch.

If field 54a contains a branch of the Receiver and field 53a contains a branch of the Sender, the Receiver will claim reimbursement from its branch or will be paid by its branch, depending on the currency of the transfer and the relationship between the Sender and the Receiver.

In all other cases where field 54a contains a branch of the Receiver, the Receiver will be paid by its branch in field 54a.

A branch of the Sender must not appear in field 54a.

If the branch of the Sender or other financial institution specified in field 53a is also the account servicer for the Receiver, field 54a must not be present.

Field 54a containing the name of a financial institution other than the Receiver's branch must be preceded by field 53a; the Receiver will be paid by the financial institution in field 54a.

The use and interpretation of fields 53a and 54a is in all cases dictated by the currency of the transaction and the correspondent relationship between the Sender and Receiver relative to that currency.

It is strongly recommended to use the standard codes. However, where bilateral agreements covering the use of codes in this field are in effect, the code must conform to the structure of this field.

Use of field 72, particularly with uncoded instructions, may cause delay, because in automated systems, the presence of this field will normally require manual intervention.

This field may contain ERI to transport dual currencies, as specified in the chapter entitled "Euro-Related Information (ERI)" in the *Standards MT General Information*.

In order to comply with the EC-directive on cross border credit transfers, the optional code word EXCH may be used to transport an exchange rate. In line with ERI, the code word EXCH is placed between slashes, followed by the exchange rate, format 12d, and terminated with another slash.

If codes INS, ACC, or BNF are present in field 72 of a received message, then these codes and the related details must be passed, unchanged, in field 72 of the subsequent message in the payment chain. - +0100 is the offset of CET against UTC in January (that is during winter time).

If the same instruction had been sent on 10 June (that is during summer time), time indication field would have been completed as follows: :13C:/CLSTIME/0915+0200

Offsets of local time zones against UTC are published in the BIC Directory download file (TZ***.txt file), which is available on www.swiftrefdata.com.

DEFINITION

This field specifies the account or branch of the Sender or another financial institution through which the Sender will reimburse the Receiver.

NETWORK VALIDATED RULES

Identifier Code must be a registered financial institution BIC (Error code(s): T27,T28,T29,T45).

Identifier Code must be a financial institution BIC. This error code applies to all types of BICs referenced in a FIN message including connected BICs, non-connected BICs, Masters, Synonyms, Live destinations and Test & Training destinations (Error code(s): C05).

USAGE RULES

In those cases where there are multiple direct account relationships, in the currency of the transaction, between the Sender and the Receiver, and one of these accounts is to be used for reimbursement, the account to be credited or debited must be indicated in field 53a, using option B with the account number line only.

If there is no direct account relationship, in the currency of the transaction, between the Sender and the Receiver, then field 53a must be present.

A branch of the Receiver may appear in field 53a if the financial institution providing reimbursement is both the Sender's Correspondent and a branch of the Receiver, and the Sender intends to send a cover message to the branch of the Receiver. In this case, the Receiver will be paid by its branch in field 53a.

When there is a single direct account relationship, in the currency of the transaction, between the Sender and the Receiver, and this is the account to be used for reimbursement, field 53a must not be present.

When field 53B is used to specify a branch city name, it must always be a branch of the Sender.

The use and interpretation of field 53a is, in all cases, dictated by the currency of the transaction and the correspondent relationship between the Sender and Receiver relative to that currency.

It is strongly recommended to use the standard codes. However, where bilateral agreements covering the use of codes in this field are in effect, the code must conform to the structure of this field.

Use of field 72, particularly with uncoded instructions, may cause delay, because in automated systems, the presence of this field will normally require manual intervention.

Instructing institutions should be indicated in the order in which they were involved in the transaction chain, that is, the first occurrence specifies the financial institution that received the instruction from the ordering institution and passed it on to the next institution in the transaction chain; the last occurrence always indicates the institution that instructed the sender of this message to execute the transaction.

If codes INS, ACC, or BNF are present in field 72 of a received message, then these codes and the related details must be passed, unchanged, in field 72 of the subsequent message in the payment chain. - +0100 is the offset of CET against UTC in January (that is during winter time).

If the same instruction had been sent on 10 June (that is during summer time), time indication field would have been completed as follows:

:13C:/CLSTIME/0915+0200
