HEAVY DUTY PALLET FORKS

(MF4840/MF4240)

At CWC we have a rich agricultural background, and we understand how a failed piece of equipment can take precious time from an already pressing schedule. That's why everything we manufacture at CWC really is Heavy Duty. Quality built, by real craftsmen. Every member of our team takes pride in their work, and we take pride in them.

A lot of pallet fork attachment frames are constructed from plate steel. The problem with that is, when presented with any amount of uneven load, they can bend, twist, and rip.

Our frames are made from structural square tubing with a wall thickness of a quarter of an inch. This heavy, rigid style of frame will not twist and bend like the lighter weight models.

Covered by a full warranty against defect or component failure for a full year!

Model MF4840 uses 1- 1/4" X 4 forks, 48 inches long with standard ITA hook mounts and is rated at 4500 pounds. MF4240 uses 1- 1/4" X 4 forks, 42 inches long with standard ITA hook mounts and is rated at 4000 pounds. The top roll back guard on both models is constructed from 1/2" thick flat bar and is twelve inches tall.

These are the last pallet forks you'll have to buy!
