BlueRidge Federal Consulting LLC
Capability Statement

BlueRidge Federal Consulting LLC (BlueRidge) is a Veterans Administration *certified* Service Disabled Veteran Owned Small Business (SDVOSB) management consulting company. BlueRidge Federal Consulting provides a full range of integrated consulting services that include Program and Project Management, Business Transformation, and Organizational Change Management (OCM) to Federal clients and we have been delivering successful consulting results since we opened our doors in January 2014.

BlueRidge Core Service Offerings

BlueRidge offers a number of professional management consulting services with a focus on Federal clients. Our solutions are tailored to the specific challenges and context of Government environments. As Veterans, our core team has a strong understanding of the Department of Defense (DoD) and the opportunities to improve the efficiency and effectiveness of our Armed Services.

Portfolio, Program and Project Management

Our Service Disabled Veteran Owned Small Business (SDVOSB) includes several experienced Project Management Professionals (PMP) who apply tailored management approaches to optimize resource allocation, minimize risk and ensure the on-time completion of management objectives within the assigned budget. BlueRidge Lean Six Sigma Black Belts have current experience facilitating process improvement to improve program efficiency and effectiveness. We also provide leadership with insightful portfolio analysis to inform resource allocation and assist in strategic planning.

The BlueRidge ProvenPM project management framework features active Risk Management to better identify, track and proactively manage risks and assumptions - reducing project volatility and improving predictability. ProvenPM also provides greater project visibility to stakeholders and leadership with intuitive dashboards that articulate Work Package-centric performance. This arms leaders with the key operational insights needed to make fact-based decisions and the ability to respond to project issues in a timely manner.

Supply Chain Management

BlueRidge consultants have provided Supply Chain Management support to the Army, Air Force and Defense Logistics Agency (DLA). We have developed Supply Chain Strategies, collected and analyzed performance data, evolved cost-saving and cost avoiding business processes, and

even supported tactical logistics interdiction to get frustrated, mission critical materiel to front-line warfighters.

Training

Our Service Disabled Veteran Owned Small Business (SDVOSB) is proud to be currently supporting the DoD Medical Health System (MHS) Genesis Program implementing a new Electronic Health Record System across all the Services clinics and hospitals world-wide. Effective classroom trainers and over-the-shoulder coaches are crucial to successful adoption of new technologies and workflows. We also have experience with training strategy, design, and development. Our work with a massive information technology and process redesign in the Air Force exposed our team to the complexities of multimedia, multi-channel training design, development and associated configuration control as the program evolved.

Technology Readiness Assessment

BlueRidge has current experience conducting Technology Readiness Assessments (TRA) for Medical Research & Development (R&D) programs. We designed and developed medically-relevant Technology Readiness Level (TRL) evaluation criteria and a TRA administration approach that efficiently collects relevant data points to quickly produce an independent assessment of current TRL and the specific activities needed to advance that technology.

Our TRA approach also considers broader technology development needs and risks. BlueRidge TRA Reports include programmatic context, resource requirement forecasts, translation considerations, and development risks to inform and enable medical modernization leaders with the data needed to better Govern investments and Plan, Program, Budget and Execute (PPBE).

Other Service Offerings

The BlueRidge team offers a number of other services to include Change Management, Media Design and Development, Modeling and Simulation, Semantic Integration, Application Performance Monitoring, Network Operations, and other similar management and technology services. In addition to our personal networks of professionals, we have also established relationships with multiple large and small business partners which enables us to pull together teams to tackle challenges that don't fully map to our offerings.
