This information was last revised March 2018

**Water Treatment Operations
Turn-Keys
and
Clean-Green Technologies**

FALCONROYCE CAPITAL LTD.

The advantages with Four (4) Level Treatments with Water Processing is Extreme Enhancements with High Purity Guarantees.

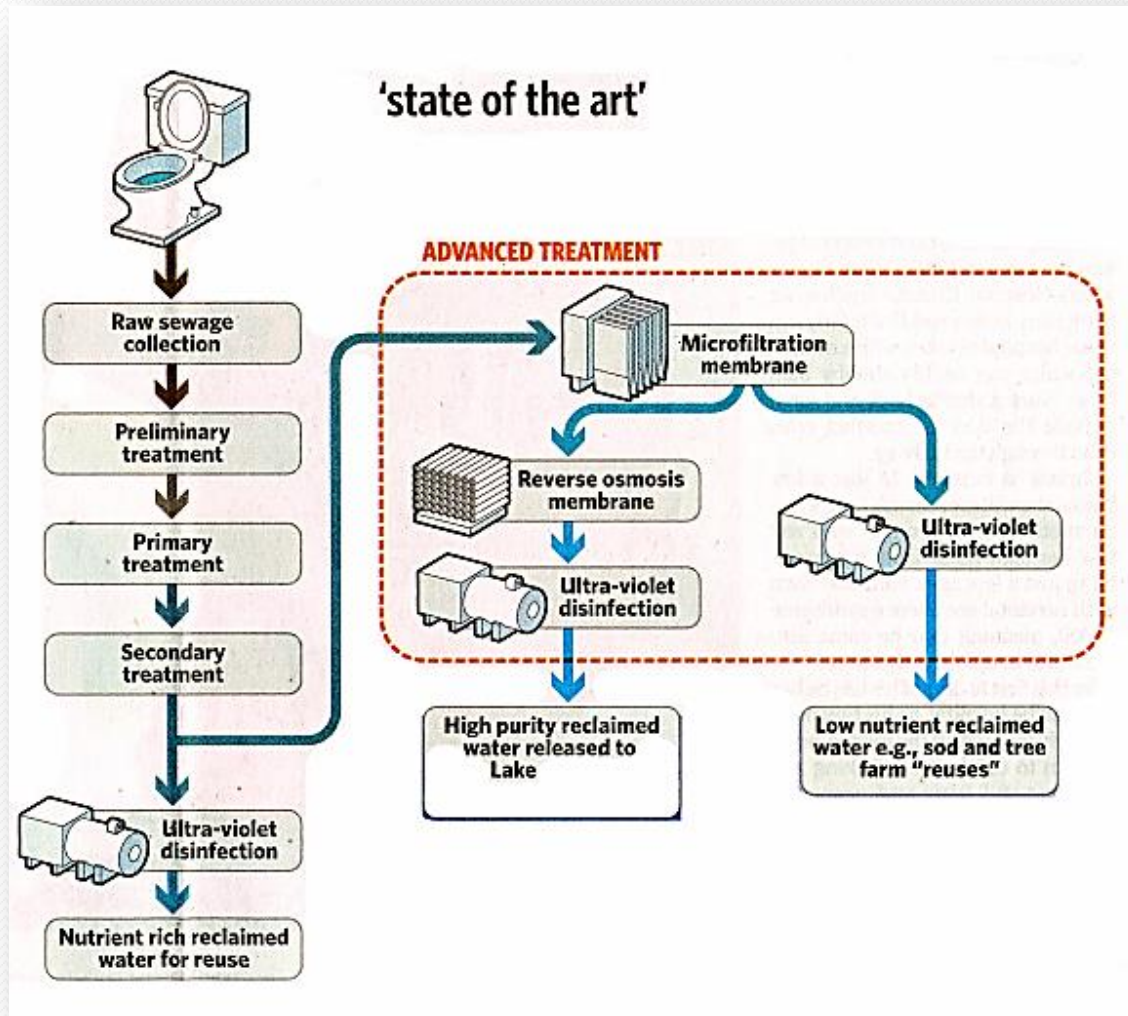

Recommendations with FCL Water Treatment Operations are to Also Include the Bio-Mass Power Plant Technologies at the same time: given the Removals of Viruses, Bacteria, and Protozoa from Water Inputs via Patents/Clean-Green Technology Inputs.

A combination of Membrane Treatments and Reverse Osmosis is also Employed for Turn-Key Operations.

These various Water Treatments are Consolidated to Enhance the Global Water Scarcity Projections by United Nations (UN) and Export Bank(s).

Each Level also Enhances the Removals of Pharmaceutical Residuals and Environmental Assessments are Employed for Each Successive Additional Level of Micro-Constituent Removal(s).

PLEASE NOTE

At 40,000,000 litres-daily of Inputs/Outputs, it is recommended that additional Clean-Green Tech Power Ops. also be added at the same-time @ In-Parallel-Basis

. . . which is @ 1MW Modular for **Bio-Mass**; and also 10MW **Solar**

. . . with Far East Operations/Turn-Keys by The Firm.

The cost for this is \$750,000,000USD per - which does NOT include for

Power Turn- Keys, given that Hydro Applications are also factored.
