### Why you need a battery backup device for your computer.

**Battery backup units have been around for decades now, but relatively few computer owners use one and that is a mistake.**

### What are battery backups and why do I need one?

**If you're unfamiliar with how it works, a battery backup unit basically sits idly by monitoring the power line for voltage drops and power outages.**

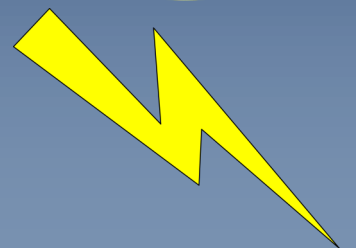

**When an issue with the power line occurs, the power source to the computer is switched virtually instantaneously from line power (electrical outlet) to the unit's internal battery. This prevents the computer from losing power.**

### Why is preventing your computer from losing power important? Well, there are several reasons:

**1 – A sudden power loss can corrupt your Windows in-**

**stallation, resulting in the computer refusing to boot up again without a visit to the repair shop.**

**2 – Brownouts and power losses can weaken the internal components of your computer or damage them outright, again resulting in a trip to the repair shop.**

**3 – If your computer shuts down unexpectedly while you're using it you'll lose any unsaved work, which can be a huge loss if you've been working on an important project for an hour or two.**

**As you can see, running your computer on wall power alone is extremely risky just because of the problems associated with power drops and outages. But there is even more to it than that...**

**Power surges and lightning strikes can damage or completely destroy your expensive computer equipment, and while a standard surge can protector help somewhat, the surge suppression built in to most battery backup units is far more effective at reducing or eliminating those dangerous surges.**

### **Conclusion**

**It makes sense to spend just a few dollars more than you would pay for a quality surge suppressor in order to protect your computer equipment from damaging power surges, brownouts and power interruptions. After all, a few extra dollars spent now will save a lot more of them later on, not to mention the aggravation you'll feel if you lose the fruits of your hard labor.**

# APC Battery Backup!

## APC VA425 Battery Backup/ Surge

- ◆ Keeps electronics running when the power goes out
- ◆ Secure your investment from lightning surges and power outages
- ◆ 255 Watts
- ◆ Up to 15 Minutes Runtime
- ◆ 6 Outlets
- ◆ 3 Year Warranty

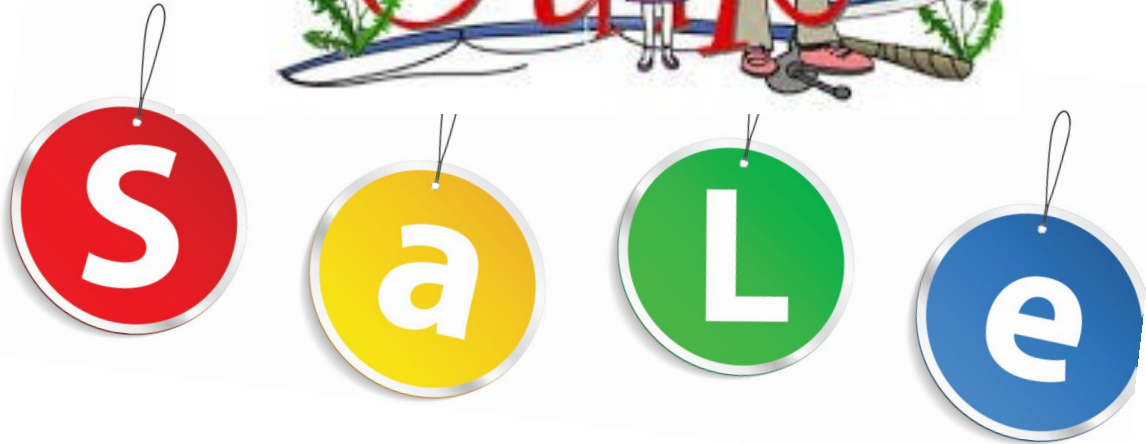

**ONLY \$59.00**

Prices good while supplies last.
