

Green Dragon

Editorial by Jamie Toth

Green Dragon has a bold yet sweet citrus diesel smell that transforms into dense clouds of vapor even at low temperatures. We have been working with Green Dragon since 2016. Our Green Dragon is a culmination of years of effort in improving the plant's genetics for our environment. Our Green Dragon hosts an incredible amount of terpinolene tempered by the heady floral, citrus, and woody flavors contributed by generous amounts of nerolidol and limonene.

Because of 54 Green Acres' commitment to organically grown, small-batch cannabis, Green Dragon is an exceptional treat to dry herb vape. It offers distinct flavor profiles at a range of temperatures making it wonderful cannabis to explore temperature-controlled dry herb vaping. At lower temperatures (below 315, which is the boiling point of THC), the vapor is dominated initially by its chemical punch, which is also packed with sweet, spicy citrus flavors. At 350 degrees that sweetness transforms into a woody, earthy flavor, which is where several of the most familiar terpenes begin to vaporize. At 388, the flavor is reminiscent of toasted marshmallows. If you turn up the temperature to just below combustion, Green Dragon blasts you with more spicy citrus flavors.

Green Dragon doesn't require a power supply to taste exceptional in a dry herb vape. The vapor clouds produced in the DynaVap series of vaporizers pack most of the terpenes into a few hits, and the hits from Green Dragon are an incredible experience. It produces vapor clouds with the mouthfeel of smoke.

When combusted, Green Dragon produces flavorful smoke that has more wood flavors than floral. It is a quickly expanding smoke with pleasant citrus after flavor and the barest hint of cedar mixed with the bright citrus and deep turpentine flavor.

While Green Dragon does boast a lot of pain relief and body buzz, it's also an intensely productive strain and is a great accompaniment to a workout or a stroll through the woods. Green Dragon produces a chatty and cerebral high, and the delicious flavors for vaping and combusting make it an exceptionally inviting strain overall. The energetic, creative bursts are tempered somewhat by the CBD content, so many who might find some sativas to be overwhelming might find this one to be a treat.

Green Dragon is one of 54 Green Acres' sativa strains. Like her sisters, she is sungrown in Southern Oregon using Certified Kind Organic processes that require the strict development of and adherence to organic growing processes. Everything that 54 Green Acres uses the water from Sucker Creek and the farm has had water rights since 1882.

Everyone at 54 Green Acres is invested in the quality of our methods, in addition to the quality of their cannabis. In addition to our small-batch cannabis crops, the farm is also home to 12 beehives and recently 54 Green Acres brought to market some of our blackberry honey with featuring our cannabis terpenes. Everything here at 54 Green Acres is grown with the same level of attention to organic processes and care and with a deep attunement to and respect for the earth.

Our strains are carefully selected to ensure that they are a good fit for the Illinois Valley, and the Green Dragon strain at 54 Green Acres has a lineage of Cambodian Diesel and Dragon OG.

It would take a magical place to create a dragon. Such a creature would only be found where water ran pure, bees and butterflies find refuge, apples were turned into exquisite cider, and where the swallows always return. In other words, a place exactly like 54 Green Acres.
