

## Arrow Wraps Q & A

Thinking about sprucing up your shafts with some arrow wraps? Here are a few of the common Q&A regarding arrow wraps.

Q-1- How do you apply arrow wraps?

A-1- 1st you prep the arrow by removing all debris from shaft, Clean w/ acetone, denatured alcohol. Let dry. Next, Lay the wrap sticky side up. (Design direction is up to you. (There is no wrong way for the design to face.) Take shaft and line it up going down the shaft and roll applying even pressure while rolling.

Q-2- Does it matter if the wrap overlaps a bit?

A-2- No, A wrap should overlap a little bit (1/16" –1/8") to ensure no separation during expanding and contracting do to hot and cold exposure.

Q-3- Can you put fletching over the edge of where the wrap overlaps itself?

A-3- Yes you can. Put the cock fletching in that spot, if you are concerned about the balance issues. Either way it doesn't make a difference. It is a matter of personal preference.

Q-4- How do you remove the wraps? Do you use hot water to loosen them first?

A-4- You can use hot water, Hair dryer, or a razor blade EZ Strip. Once again it comes down to personal preference and what you feel most comfortable with. NOTE: Before you re-wrap arrow make sure all adhesive is removed off the shaft after wrap is taken off.

Q-5- Before re-fletching a wrap, would you also have to remove and apply a brand new wrap before you could re-fletch an arrow that had a wrap on it?

A-5- Yes, it's best to remove all that is on a used shaft so that there is no debris, Making it a perfect surface for adhesion. This is the worst thing about arrow wraps. Heat the wrap with a blow dryer or industrial hot gun to soften it. It will peel much easier. Then use Goo Gone, acetone, or some other solvent to remove the residue. It comes off pretty easy.

Q-6- How much does the average wrap weigh?

A-6- Wraps weigh anywhere from 3.9 -25.4 grains

On solid wraps the pigment and the material varies causing the difference in weight.

Q-7- How long do the wraps last for?

A-7- Depending on how much and how well you shoot, what rest you use and how you take care of your equipment determines how long the wraps last for.

Q-8- What do you clean the wraps with before you fletch you arrows?

A-8- Only use water or a dry rag!!!!!! Using any chemical based cleaner may cause ink to be removed. This goes for any brand of wraps you purchase anywhere.

Q-9- What type of material are wraps made of?

A-9- Wraps are generally made of HP vinyl. This Vinyl is made for boat and vehicle lettering/graphics.
