ASCE HAWAII SECTION JUNE DINNER MEETING NOTICE

Program: The 2010-2011 Canterbury, New Zealand, Earthquake Sequence

The 2010-2011 Canterbury, New Zealand, earthquake sequence started with the $M_w 7.0$, September 2010 Darfield earthquake that occurred to the west of Christchurch and included 3 events having $M_L \geq 6.0$ and 45 events having $M_L \geq 5.0$. Because of its close proximity to Christchurch and shallow depth of fault rupture, the $M_w 6.2$, February 2011 Christchurch earthquake was the most devastating event in the sequence, resulting in nearly 200 deaths and thousands of injuries, with widespread liquefaction and damage to the built environment. This earthquake sequence provided a unique opportunity to evaluate in considerable depth the effects of earthquake shaking of different intensities on various soil profiles, as well as the effects of liquefaction on building foundations and critical lifeline systems. The focus of this presentation is on some of the geotechnical engineering lessons learned from the Canterbury Earthquake Sequence.

Presented by:

- Professor Russell A. Green, PhD, PE, Professor of Civil Engineering at Virginia Tech, Blacksburg, VA
