

██████████ – At Primary Site (Primary tab) – “NR-12” (no cancer mentioned in record) and had been left in suspense. Lung ca mets. (UM Date of first contact: 7/25/13 – Date abstracted 6/19/14 -11 months; Class 2)

██████████ – Status tab - “04” and left in suspense. (UM Date of first contact: 9/9/13 – Date abstracted 7/29/14 – 10 months; Class 3 breast ca)

Primary Site – “Class 3”: ██████████ (UM Date of first contact: 6/27/13 – Date abstracted 7/21/14 – 13 months; Class 3 colon); ██████████ (UM Date of first contact: 8/6/13 – Date abstracted 6/2/14 – 10 months; Class 3 breast); ██████████ – this case was in suspense and has been deleted by someone – it was actually non-reportable but the intent to leave it undone by someone thinking it was a “Class3” is apparent (I have the page print showing “Class 3”).

██████████ – Primary Site - “Class 3” breast, blood ca. This was actually two primaries, a Class 1 and a 2. (These dates were close to the required six months when I completed them. However, they were intended not to be completed.)

██████████ – Status tab - “NR-5” (UM Date of first contact: 10/24/11 – Date abstracted 8/13/14; Class 3 breast)

██████████ – Primary Site – “Class 3” (this was actually a benign brain diagnosed prior to 2004 which is NR)

██████████ – Status tab – “nr-4, nr-5” – (Both completed as Class 3s both blood ca) (Both cases: UM Date of first contact: 7/15/10 – Date abstracted 8/14/14)

██████████ – Case Status (General tab) set to “N”. Is a Class 2 breast. (UM Date of first contact: 7/15/13 – Date abstracted 8/20/14 – 13 months)

██████████ – Status tab – “004 HX CA, NED” – First visit 2011 says bone mets prostate ca (This is in the new program UChart. Pt actually came in 2009, notes in older CaneCare.) Class 3. (UM Date of first contact: 12/2/09 – Date abstracted 8/18/14; Class 3)

---

#### Additional cases:

██████████ – Status tab – “NR-5” – (UM Date of first contact: 1/20/11 – Date abstracted 9/16/14) Class 3 with breast ca mets. Also Class 3 Newly diagnosed blood cancer (about 6 months).

██████████ – Status tab – “004” - (UM Date of first contact: 6/30/10 – Date abstracted 5/21/14) Class 3s (2) breast and melanoma.

██████████ – Primary Site – “Class 3” - (UM Date of first contact: 8/11/05 – Date abstracted 9/12/14) colon (another primary eye was already completed)

██████████ – Primary Site – “Class 3” - (UM Date of first contact: 6/17/13 – Date abstracted 8/11/14 – 14 months) colon

██████████ – This case was completed as a Class 2. Lung. (Initial visit 4/18/11 – Date abstracted 1/31/12). This is also outside of 6 months. The treatment at UM was after disease progression and it should have been a Class 3. I do not know if this was intentional but this abstractor has noted a number of the “Class 3’s” or “NRs” that I have seen on cases never done (that should have been). This person is also a very poor abstractor in general. This case was recently on my list so I made note of it. It was sent to the State in 2012.
