Measuring Wheels

Metal Professional Wheels

Simplicity and durability are the two principles that guided the design of the Metal Professional Wheel. The result is a wheel that rolls easily over the most difficult terrain and can stand up to constant heavy use.

- Innovative, simple centerline design, great balance.
- Rugged 3/4" steel tubing—strongest frame in the field.
- Time-tested & proven counters—huge numbers.
- Only two moving parts (reset and ticker) mean fewer things can go wrong.
- Superior counter protection and placement—5-digit counter. Up to 99,999 feet.
- Compact fold-down—easily reduces to 1/2 its size for storage and portability. Storage is a snap.

Indoor/Short Run Wheels

Smaller 1-foot wheels combine Keson quality and reliability with convenient size and light weight. Typically used in short run and indoor applications these products are compact and very reliable. It's easy to measure curved, horizontal and asymmetrical surfaces. These products are popular with realtors, appraisers, police officers, and homeowners. You can measure alone, and you can measure faster than two people with a tape measure. The single wheel and dual wheel both have a 5-digit, easy-read, magnified counter that measures 9,999 feet, 11 inches (or 9/10ths of a foot with engineers' models, or meters and decimeters) without resetting.

Kesonite™ Wheels

There are inherent vulnerabilities of die cast and metal spoked wheels. Everyday use requires that a wheel handle some rough treatment without dents and without bending. Not all wheels are up to this. The solution? A new material. Kesonite is a strong, dense metal/resin composite. It holds its shape better than metal and it's stronger than a spoked or die cast wheel. The weight of the wheel makes it easier to use and more accurate in rough terrain.
