Additional information is required separately for the system design detail.

#### Figure 4: Diagrammatic representation of soil structure

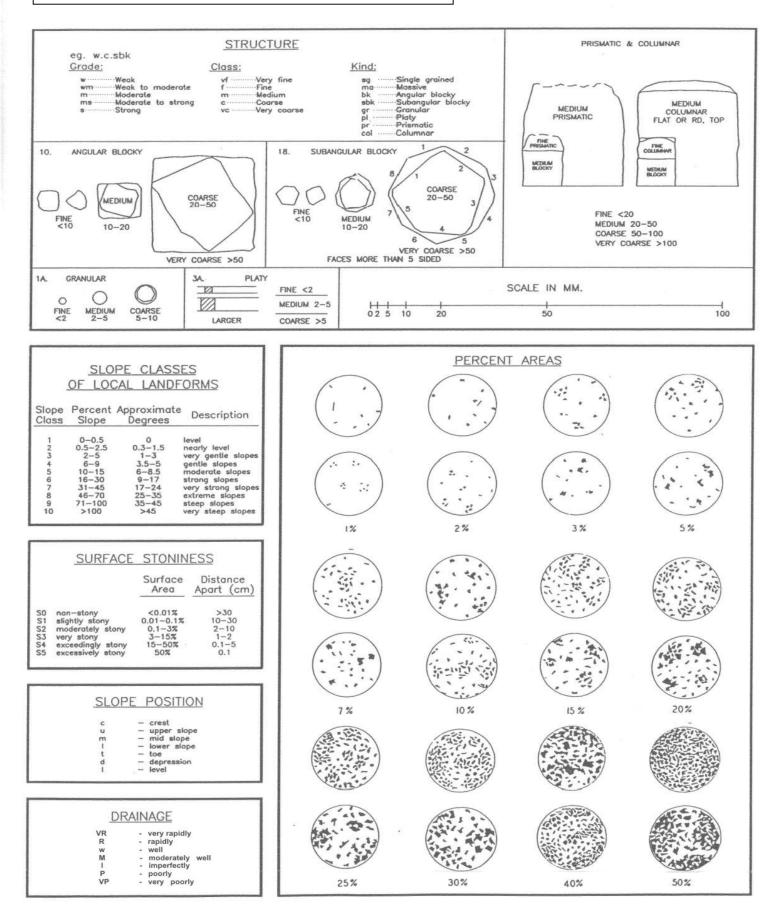

Table 10. Types, kinds and classes of soil structure.

| Type<br>Blocklike - soil particles<br>arranged around a point and<br>bounded by flat or rounded<br>surfaces<br>BK                                   | Kind (Kind Code)<br>Angular blocky (ABK) peds<br>bounded by flattened, rectangular<br>faces intersecting at relatively sharp<br>angles                                 | <ul> <li>Structure Class and Code</li> <li>VF: very fine angular blocky</li> <li>F: fine angular blocky</li> <li>M: medium angular blocky</li> <li>C: coarse angular blocky</li> <li>VC: very coarse angular blocky</li> </ul> | Size <sup>1</sup> (mm)<br><5<br>5-10<br>10-20<br>20-50<br>>50 |  |
|---|--|--|---|--|
|   | <b>Subangular blocky (SBK):</b> peds<br>bounded by slightly rounded,<br>subrectangular faces with vertices <sup>2</sup><br>of their intersections mostly<br>subrounded | <ul> <li>VF: very fine subangular blocky</li> <li>F: fine subangular blocky</li> <li>M: medium subangular blocky</li> <li>C: coarse subangular blocky</li> <li>VC: very coarse subangular blocky</li> </ul>                    | <5<br>5-10<br>10-20<br>20-50<br>>50                           |  |
|   | <b>Granular (GR):</b> spheroidal peds<br>bounded by curved or very irregular<br>faces that do not adjoin those of<br>adjacent peds                                     | <ul> <li>VF: very fine granular</li> <li>F: fine granular</li> <li>M: medium granular</li> <li>C: coarse granular</li> <li>VC: very coarse granular</li> </ul>   | <1<br>1-2<br>2-5<br>5-10<br>>10                               |  |
| Platelike: soil particles<br>arranged around a horizontal<br>plane and generally bounded<br>by relatively flat horizontal<br>surfaces<br>PL         | <b>Platy (PL):</b> peds flat or platelike;<br>horizontal planes more or less well<br>developed   | <ul> <li>VF: very fine platy</li> <li>F: fine platy</li> <li>M: medium platy</li> <li>C: coarse platy</li> <li>VC: very coarse platy</li> </ul>  | <1<br>1-2<br>2-5<br>5-10<br>>10                               |  |
| Prismlike: soil particles<br>arranged around a vertical<br>axis and bounded by<br>relatively flat vertical<br>surfaces.<br>PR                       | <b>Prismatic (PR):</b> vertical faces of peds well defined and vertices <sup>2</sup> angular (edges sharp); prism tops essentially flat                                | <ul> <li>VF: very fine prismatic</li> <li>F: fine prismatic</li> <li>M: medium prismatic</li> <li>C: coarse prismatic</li> <li>VC: very coarse prismatic</li> </ul>  | <10<br>10-20<br>20-50<br>50-100<br>>100                       |  |
| Ĩĸ  | <b>Columnar (COL):</b> vertical edges<br>near top of columns not sharp<br>(vertices <sup>2</sup> subrounded); column tops<br>flat, rounded, or irregular               | <ul> <li>VF: very fine columnar</li> <li>F: fine columnar</li> <li>M: medium columnar</li> <li>C: coarse columnar</li> <li>VC: very coarse prismatic</li> </ul>  | <10<br>10-20<br>20-50<br>50-100<br>>100                       |  |
| Structureless: no observable<br>aggregation of primary<br>particles or no definite<br>orderly arrangement around<br>natural lines of weakness<br>MA | Single grained (SGR):<br>Massive (MA):   | Loose, incoherent mass of indivi<br>particles, as in sands<br>amorphous; a coherent mass showing r<br>any distinct arrangement of soil partic<br>into clusters of particles; not peds  | no evidence of  |  |

Cloddy (CDY): not a structure; used to indicate the condition of some ploughed surface, grade, class, and shape too varied to be described in standard terms.

<sup>1</sup> The size limits refer to measurements in the smallest dimension of platy, prismatic, and columnar peds and to the largest of the nearly equal dimensions of blocky and granular peds. <sup>2</sup> Definition of vertex (plural, vertices): the intersection of two planes of a geometrical figure.

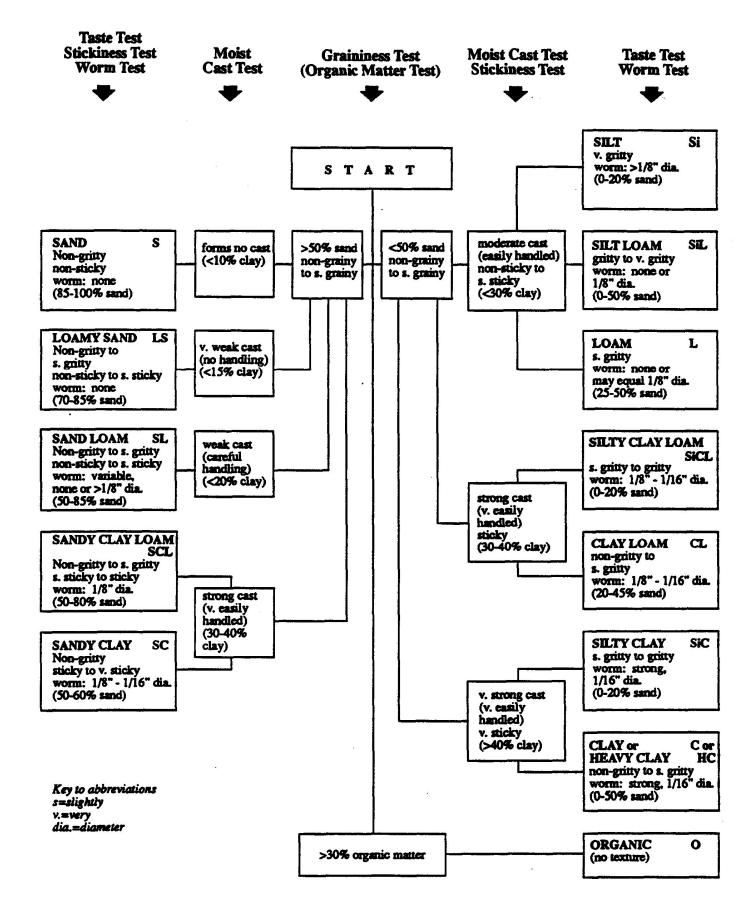

| Consistence – moist so | il   |
|------------------------|--|
| Loose:                 | No intact sample can be obtained.                              |
| Friable:               | Structure breaks down with slight force between the fingers.   |
| • Firm:                | Structure breaks down with moderate force between the fingers. |
| • Extremely firm:      | Structure breaks down with moderate force between the hands or |
|                        | slight foot pressure.  |
| Rigid:                 | Structure breaks down only with foot pressure.                 |

| Code |  | Structure Grade Definition  |
|------|--|---|
| 0    | Massive /or<br>single grained<br>used to describe<br>sands | This describes a soil that has no developed structure. There is no aggregation<br>of primary particles or no definite orderly arrangement around natural lines o<br>weakness.   |
| 1    | Weak   | Peds are either indistinct and barely evident in place, or observable in place bu<br>incompletely separated from adjacent peds. When disturbed, the soil materia<br>separates into a mixture of only a few entire peds, many broken peds and much<br>unaggregated material.   |
| 2    | Moderate   | Peds are moderately durable, and are evident but not distinct in the undisturbed<br>soil. When disturbed, the soil material parts into a mixture of many wel<br>formed, entire peds, some broken peds, and little unaggregated material. The<br>peds may be handled without breaking and they part from adjoining peds to<br>reveal nearly entire surfaces which have properties distinct from those caused<br>by fracturing. |
| 3    | Strong   | Peds are durable and evident in the undisturbed soil, adhere weakly to one<br>another, withstand displacement and separate cleanly when the soil is<br>disturbed. When removed, the soil material separates mainly into entire peds<br>Surfaces of unbroken peds have distinctive properties, compared to surface<br>that result from fracturing.   |

# Structure Grade Descriptions

# Mottling Descriptions

| Parameter | Code      | Description   |
|-----------|-----------|---|
| Abundance | Few       | <2% of the exposed surface  |
|           | Common    | 2-20% of the exposed surface  |
|           | Many      | >20% of the exposed surface   |
| Size      | Fine      | < 5 mm  |
|           | Medium    | 5-15 mm   |
|           | Coarse    | >15 mm  |
| Contrast  | Faint     | Evident only on close examination. Faint mottles<br>commonly have the same hue as the colour to which they<br>are compared and differ by no more than 1 unit of<br>chroma or 2 units of value. Some faint mottles of similar<br>but low chroma and value can differ by 2.5 units of hue.  |
|           | Distinct  | Readily seen, but contrast only moderately with the colour to which they are compared. Distinct mottles commonly have the same hue as the colour to which they are compared, but differ by 2 to 4 units of chroma or 3 to 4 units of value; or differ from the colour to which they are compared by 2.5 units of hue but by no ore than 1 unit of chroma or 2 units of value.                                       |
|           | Prominent | Contrast strongly with the colour to which they are<br>compared. Prominent mottles are commonly the most<br>obvious colour feature in a soil. Prominent mottles that<br>have medium chroma and value commonly differ from<br>the colour to which they are compared by at least 5 units<br>of hue if chroma and value are the same; or at least 1 unit<br>of chroma or 2 units of value if hue differs by 2.5 units. |
