0830-1700 Daily

- **Early Bird Registration: Register and remit payment by December 1st for \$349/Person**
- ***Registration will close on January 5 to ensure distribution of supplies***

### ABOUT EVIDENTIARY PHOTOGRAPHY

In this comprehensive 2-day (16 hour) class, crime scene responders and investigators, field investigators, and laboratory personnel will learn the techniques of Evidentiary Photography. Evidentiary Photography has become a vital skill for forensic science practitioners and crime scene investigators with the evolution of digital imaging within the laboratory. Impression evidence is being enhanced and compared more frequently in a digital environment. Starting at the crime scene, the entire examination process begins with the ability of the practitioner to effectively capture the impression photographically, to allow for a thorough analysis and comparison to be performed.

***Participants will receive: Flex Clamp Arm, Flashlight with UV, Camera Filter Set, Orange Goggles, a Lightweight Tripod, and a Light Table to keep!***

This course has been approved by the IAI Latent Print Certification Board for continuing education towards initial certification and recertification.

\*In-Person attendees may be required to show proof of COVID Vaccination\*
