

YOUR "RIGHT TO KNOW"

As part of our commitment to your safety and well being, we have developed a program designed to fully inform you about any hazardous chemicals present in your work area. All hazardous chemicals used in your work are labeled or marked with identifying names and appropriate hazard warnings.

When you are first assigned to work with or around any hazardous chemical, you will be shown safe and proper procedures for using the chemical and how to protect yourself from unnecessary exposure to it. You will also learn how to detect chemical leaks or spills, the specific exposure hazards, and procedures for dealing with chemical emergencies. Our system of labeling hazardous chemicals will also be explained to you. We will provide similar training whenever a new chemical hazard is introduced to your work area and whenever we learn of a newly-discovered hazard presented by an existing chemical.

You may also review additional information about any chemical hazard in your work area. A complete list of hazardous chemicals present at each location is available in the office.

Also available for your review are Material Safety Data Sheets (MSDS) for each chemical or group of similar chemicals. These MSDS explain in detail the hazards of exposure, the symptoms of effects, proper conditions for use and exposure, emergency procedures and treatment, and appropriate clean-up methods for spills and leaks.

Upon request, you may also see a copy of our entire written program for communicating information about chemical hazards. Please see your supervisor if you would like to review this document.

Our "Right to Know" program fully meets all state and federal specifications. We at the Dealership are proud of the fine safety record that we have helped establish, and we believe that this program is an essential component of a strong, safe work place program.
