

Options for Turning Off Water (in order of preference):

1. Find your **POE Valve** and close. The POE valve is typically at the wall as the water pipe enters your home. In some cases it may be located in a valve box downstream of the meter box.
2. Locate your BFP and close the **BFP Isolation Valves** on the House side. The BFP is typically located in a valve box downstream of the meter box.
3. Locate the **Curb Stop Valve** and rotate $\frac{1}{4}$ turn to close. **WARNING:** This is a utility valve. Damage to this valve may result in repair costs charged to the homeowner.
