The HILT is six different patient handling products in one.

One of the most common calls for assistance is to help an uninjured patient off of the floor. Without a tool, responders must lift the patient from awkward positions and expose themselves to injury. The HILT can be configured to position underneath the patient and allow responders to lift the patient with safe lifting techniques

DMTH2800 HILT Model 2800

1,000 pound capacity
 Use with up to 14 responders
 Weighs less than 5 pounds
 6" H x 24" W when stored
 Flexible Nylon construction

DMTH1400 HILT Model 1400 (Economy)

1,000 pound capacity
 Use with up to 14 responders
 Weighs approximately 1.5 pounds
 2" x 11" x 14" when stored
 Non-woven / poly construction

The HILT has the following advantages:

- Light in weight.
- Quickly deployable.
- Safety straps to stabilize the patient within the stretcher.
- Easily cleaned.
- Compact and easily stored.
- Does not interfere with an x-ray.
- Can be combined with other patient handling products.
- Designed to be used by patient attendants of various heights and builds.
- Can be used by one or up to 14 patient attendants at one time.

The HILT can assist with the following:

- Lift and carry a supine patient.
- Lift and carry a seated patient.
- Carry a patient up or down stairs.
- Conduct a single-person rescue.
- Combine with a backboard.
- Conduct a lateral transfer.
