

How to care for your HUMAN HAIR wig

1. Wash your wig every six to eight wearings in warm weather and every twelve to fifteen wearings in cooler weather. If you notice your wig looks especially greasy or dirty, wash it more frequently.
2. Gently remove tangles with a wig brush or comb, working gradually from the ends to the base of the cap.
3. Rinse the wig with warm water and keep the water flowing in the same direction as the hair. Distribute the shampoo evenly throughout the hair using your fingers spreading it all over.
4. When washing, pay special attention to the area around the face which may accumulate dirt, oil and makeup.
5. Rinse with warm water to remove the shampoo. Take care to rinse the hair in the direction from roots to ends to avoid tangling.
6. Put conditioner on the hair using two or three times the amount that you would use for hair growing on your head. Leave the conditioner in for 5 to 10 minutes. Rinse well making sure no traces of the conditioner is left in the hair.
7. Gently place the wig onto a fresh towel and allow the towel to absorb any excess water.
8. Place the wig on your wig stand and let air dry. Do not put a wet wig on a mannequin head as this may stretch out the cap.
9. Once the wig is dry, style it normally using rollers, flat iron or a curling iron.
10. You can also use a blow dryer once the hair has dried a little but take extra care around the root areas as the knots expand when wet.

use shampoo that is low in sulfates or a wig shampoo and conditioner
