

Pineapple

Editorial by Jamie Toth

Pineapple is a pure sativa whose environment strongly dictates whether it is perceived as an indica or a sativa. Don't let the terpene profile fool you – though myrcene dominates, 54 Green Acres' Pineapple packs quite the sativa punch. Pineapple has a pungent smell that gains a slight diesel sweetness to it when ground. We have been growing Pineapple at 54 Green Acres since 2017.

When you start to vape pineapple at lower temperatures, the main flavors are introduced in the low temperatures and are so plentiful that they stay through the end, even for desktop vaporizers that can vaporize indefinitely. This is a great cannabis to use to showcase a new Arizer Extreme Q, because the flavors are so long lasting, but there's also enough of a variance in the temperature that you can demonstrate how you can zero in on particular terpenes by temperatures. . At lower temperatures, the distinct pineapple flavor is first evident, but also has a complex mix of green apples, oranges, and cinnamon with a slight hint of pine. For the middle range between 330 and 390, a musky citrus flavor bursts into the scene, and the vapor becomes very thick. There's a slight cinnamon after flavor in this range. If you go into the high range of vaporization temperatures (those below 451 Farenheit), you'll encounter a fresh, green tea flavor. If you smoke Pineapple you'll be treated to a fruity, sweet heavy smoke with spicy body.

Our phenotype of Pineapple produces an uplifted, creative high that is great for problem solving, so if you're trying to think your way through a coding problem or are doing your daily sudoku, this is a great companion for it. It has a head tingling buzz that comes with it that is effective for treating many types of migraine

and stress headaches. It is an active high that would be a great compliment to a wide array of fitness endeavors from a great session of weightlifting to a refreshing, long walk.

The terpenes from our Pineapple strain are also featured in our honey products. We produce three varieties of raw honey from our 12 beehives. Our bees love our natural wild blackberries which brings a berry flavor to the honey that is then further complimented by the fruity flavors of our Pineapple terpenes. This honey mixes well with any tea, but is a real treat drizzed over some yogurt with fresh berries.

All of our cannabis is sungrown on our Southern Oregon farm where we grow our apples, lettuce, and cannabis organically. It's watered from Sucker Creek, a tributary of the Illinois. The property has had water rights for the land since 1882. To further demonstrate our commitment to Certified Kind farm, which means that all of our soil, nutrients, and processes are organic and are as gentle to the Earth as possible. We are re-certified every year to ensure our compliance with the rigorous Certified Kind standards that are as focused on how cannabis is grown, in addition to its yield. Certified Kind farms are focused on being Kind to Earth, and Kind to Life.

In everything we do, from beekeeping to cannabis, 54 Green Acres farm is dedicated to purely organic amazing results. We work with the Earth and nature to do everything from control pests, to flavoring our honey, to ensuring that our cannabis is of the highest quality with the best flavor and most robust terpene profile that Oregon's Illinois Valley can offer.
