

# Fuel Trailer with Diesel & Gasoline Tanks

**A**s your event grows so does the amount of fuels consumed by generators, light towers, golf cars, UTVs and other site machines. The only thing worse than having your equipment run out of fuel (always when you need it most) is the cost of sending one of your key staff off premises with a gas can to get more fuel.

This single axle trailer holds two tanks, a 100 gallon one for diesel fuel and a 75 gallon one for gasoline. Both have 12 volt electric pumps on them to deliver the fuels and digital gauges to measure the delivery of the fuels. It is self contained with a 12 volt batteries and an AC charger if needed.. Plus it has a CO2 cylinder with a 50 foot long hose to allow you to refill tires on vehicles and equipment should that be needed. A fire extinguisher is included and the trailer can be towed with a 2" trailer ball.

Typically it is available pre filled with fuels and you would refill the tanks prior to returning it. This enables you to make one stop at the gas station instead of many trips, also allowing you to purchase the fuels at the best prices. Delivery is an option, as is DSM refilling the tanks.

As with all of our equipment no insurance of any type is included.
