Rethink the Cost of Luxury

Take Advantage of Apollo's February "Cover Your Assets" Promotion

MOORPARK, CA, February 1, 2015 - Dust off the snow and the winter chill and get ready for Spring. Apollo is offering a "Free Dust Cover" (up to \$59 value) with every Apollo enclosure purchased in the month of February. Stylistically self-assured presence, slim silhouette and quality feature-sets; Apollo environmental TV enclosures combine a thin, contemporary profile to accommodate the latest models of 39"-50" LED/LCD Televisions with modern luxury, safety and affordability. Since Bigger is Better, Apollo is expanding to include up to 60" TVs, which will be available in second quarter. Apollo differentiates itself even further by **including** either a weather-proof articulating wall mount, a non-articulating wall mount or adjustable height ceiling mount as standard equipment. The enclosure colors are stock in black and available in Metallic Bronze, Silver and White as an upgrade.

Apollo Enclosures are currently available in two models. Model AE4239, designed for 39"- 42" LED/LCD televisions, **including your choice of mounting solutions**, has an MSRP of **\$995**. Model AE5046, for 46"-50" LED/LCD televisions, **including your choice of mounting solutions**, has an MSRP of **\$1095 or \$1155**.

With the low cost of large screen LED/LCD televisions, the total Apollo outdoor solution is extremely affordable for customers to now enjoy the luxury of outdoor TV entertainment.

"Our enclosures are the perfect answer for dealers who need reliable and cost-effective solutions for their customers, ultimately correcting a vast imbalance in unsafe installations of indoor televisions outdoors, where they were not designed or intended for that use," says Lynn Stearn, Apollo Enclosures President. "These environmental TV enclosures are designed to provide the impressive viewing quality and weather-proof features required to extend the life of indoor flat panel TVs in the great outdoors; in style and at an MSRP that will most certainly fit within any budget."

Our enclosures are designed combining a powder coated aluminum body with anti-reflective safety glass that protects the customers LED/LCD TV and improves contrast while significantly reducing ambient reflection. *Tight-seal* technology securely seals and protects the customers LED/LCD TV from rain, snow, dirt, insects and other outdoor elements. The down firing sound ports, sported at the base of the enclosure, effectively maximize the audio capabilities of the TV. The 9' outdoor rated power cord provides the necessary safety for power in the outdoor environment and the included 3' high-speed HDMI cable and coupler provides a convenient patch cable to for easy connection when attaching to the mount, where cables are ready to connect. The water-tight cable cover secures the proper seal against all cables. The weatherproof mounting solutions provide a low profile fit with the articulating mount options delivering a panoramic viewing experience from almost anywhere. The sleek, tapering profile of 4.9" (50") and 5.4" (42") in depth embodies the visual effect of modern refinement in the outdoor enclosure industry.

The interior design of the Apollo enclosure is an expression of simplicity. An efficiency of internal climate control in the filtered, thermostatically controlled air circulation fan that keeps the housing cool in temperatures up to 122 °F combined with a 3-outlet internal power bank for TV, fan control and optional accessories. Selectable TV mounting points allow for the proper positioning of included mounting brackets adapting to the varying VESA patterns of TVs to command solid placement inside the cabinet. A finishing touch includes trim-elements to frame the smaller TVs for each enclosure.

Apollo recognizes the importance of efficiency and made a decisive contribution to the installation experience. A 4-step process – 1) Attach your TV to the Apollo rear panel, 2) Install the mount (to wall or ceiling); 3) attach the rear panel with the mounted TV to the mount and 4) slip on the front cover and secure close with 2 screws – Done!

Available accessories include a thermostatically controlled heater module for areas of high humidity or where temperatures dip below -04°F, modesty frames for framing in the smaller size TV's in the enclosures and dust covers to preserve the aesthetics of your enclosure for years.

About Apollo Enclosures

Apollo's environmental TV enclosures are designed for installation in consumer (patio, backyard) or commercial (stadiums, arenas, restaurants, hotels, theme parks) applications. All models are available through Apollo's network of Authorized Resellers. To inquire about becoming an Authorized Reseller, contact Apollo Enclosures at 888-414-5919, or visit the Reseller Inquiry page at www.apolloenc.com.
