THERE NO SUCH THING AS A MILD WINTER IN THESE PARTS YOU MIGHT BE READY BUT IS YOUR EQUIPMENT?

The Perfect Answer for Winter Equipment

Equipment utilized in the course of winter is vulnerable to the natural and fabricated elements that surround the season. Inclement weather and road salts are highly destructive to metals and electrical connections. Vehicles traveling through salted roads face a constant barrage of highly corrosive chemicals used for road stabilization. These chemicals kick up and cling to metals and underbodies, re-crystallizing as they dry. Fluid Film will not freeze, remaining active and migratory on metal surfaces. Penetrating metal pores, Fluid Film creates an airtight seal that blocks road salts and moisture. Remaining slick in sub-zero temperatures, Fluid Film is an excellent release agent for snow, helping to keep snow and ice from building up or sticking to metal. Fluid Film is also the perfect product for winterizing equipment stored indoors and out.

GET YOUR FILM ON!

Snow Blowers

Spray Fluid Film on the auger housing, auger, impeller and coat the inside of the discharge chute to protect and use as a snow release agent.

Undercoating of Vehicles

Fluid Film penetrates to the base metal, remaining active and migrating to inaccessible areas. Provides long term protection from the corrosive effects of salts, calcium chloride, moisture and fertilizers, resulting in a "no drip" application which will protect vehicle's undercoating from metal deterioration.

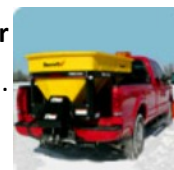

Snow Plows

Fluid Film will protect entire plow, all electrical connections and underbody from corrosion and help keep snow from building up on plow blades.

V-Box Spreader

Spray Fluid Film inside, in chute, and on all chains.

All Applications Listed

- Ice Fishing Equipment
- Locks
- Plow Blades
- Salt Spreaders
- Ski Bindings
- Ski Resort Equipment
- Snow Blowers
- Snow Climbing Equipment
- Snow Plows
- Snow Mobiles
- Snow Shovels
- Snow Sleds
