**Subject:** Webinar Comments

After the webinar, I have several comments.

1. While the SOW is a good first step, I would like us to create a Dynamic Dispatch model for each of the six Participating Planning Authorities. Each model would simulate supply and demand options. Given a set of prices, the model would chose the lest cost options every hour of a year. environmental regulations could be represented by taxes.  
that

2. New gas pipelines

May take a long time to build.

Need a pipeline to drill a well.

3. 20 years ago built gas generation that was not used.
