

# AG-102

## TECHNICAL SPECIFICATIONS

**Arm or Belt Mounted Design.** This revolutionary feature allows the user to have both arms free while taking temperatures in the field. The smartphone-sized device is fast, lightweight, water resistant and reliable in harsh environments.

**Designed with Safety in Mind.** Current devices on the market are cumbersome and heavy. Most require the users to hold up the device to see temperature results or unsafely carry it around their necks with straps or braces. Thousands of accidents happen every year due to staff taking their eyes off of large animals for just a few seconds. This device allows the user to stay focused while safely measuring temperature.

**High Visibility Display.** Reading temperatures is made efficient with the large, bright blue, backlit LCD screen. Easy-to-understand, universal screen icons allow for ease of understanding rather than cryptic messages or codes.

**Customizable Alert Function.** User can pre-set temperatures that they are looking for unhealthy animals to breach. When these values are found in the temping process, the device will alert the user in the form of audible beeps, visual backlight and LED flashing.

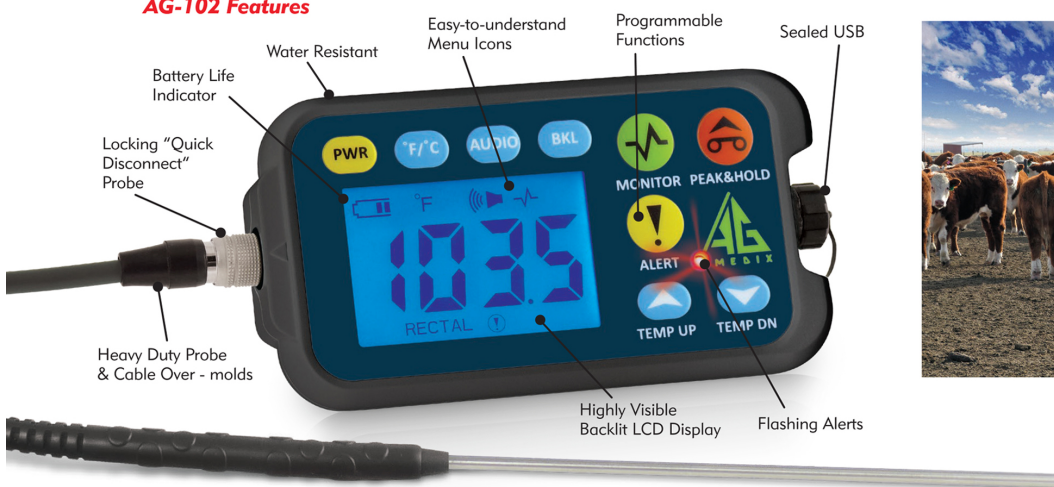

**Monitoring / Peak / Hold Modes.** The ultra fast speed of the AG-102 comes from the relationship of its proprietary probe and the device's software. Once inserted, the smart probe quickly senses the temperature rise from ambient and instantly heats up to within just a few degrees of the core body temperature. This allows for faster temperature acquisition times in extreme cold weather conditions.

**Solid Construction.** The robust connect/disconnect for the probe cables allow the user to change probes in a snap, while the waterproof USB port cap keeps the power connection dry when not in use. The LCD window is protected by a heavy gauge, optically clear Lexan.

**Fast & Easy Recharging.** Charging can be done almost anywhere via USB-A port with a PC, wall plug or the included vehicle power point to USB adapter. USB can also be used to download the latest product software releases.

**Custom Padded Arm Band.** The comfortable arm band protects the device from dirt, dust and moisture in the field and provides storage sleeve to hang the probe. The rugged material and construction of the armband allows for cleaning with most typical cleaning agents as well as machine washing.

### AG-102 Features

# AG-102 ANIMAL THERMOMETER

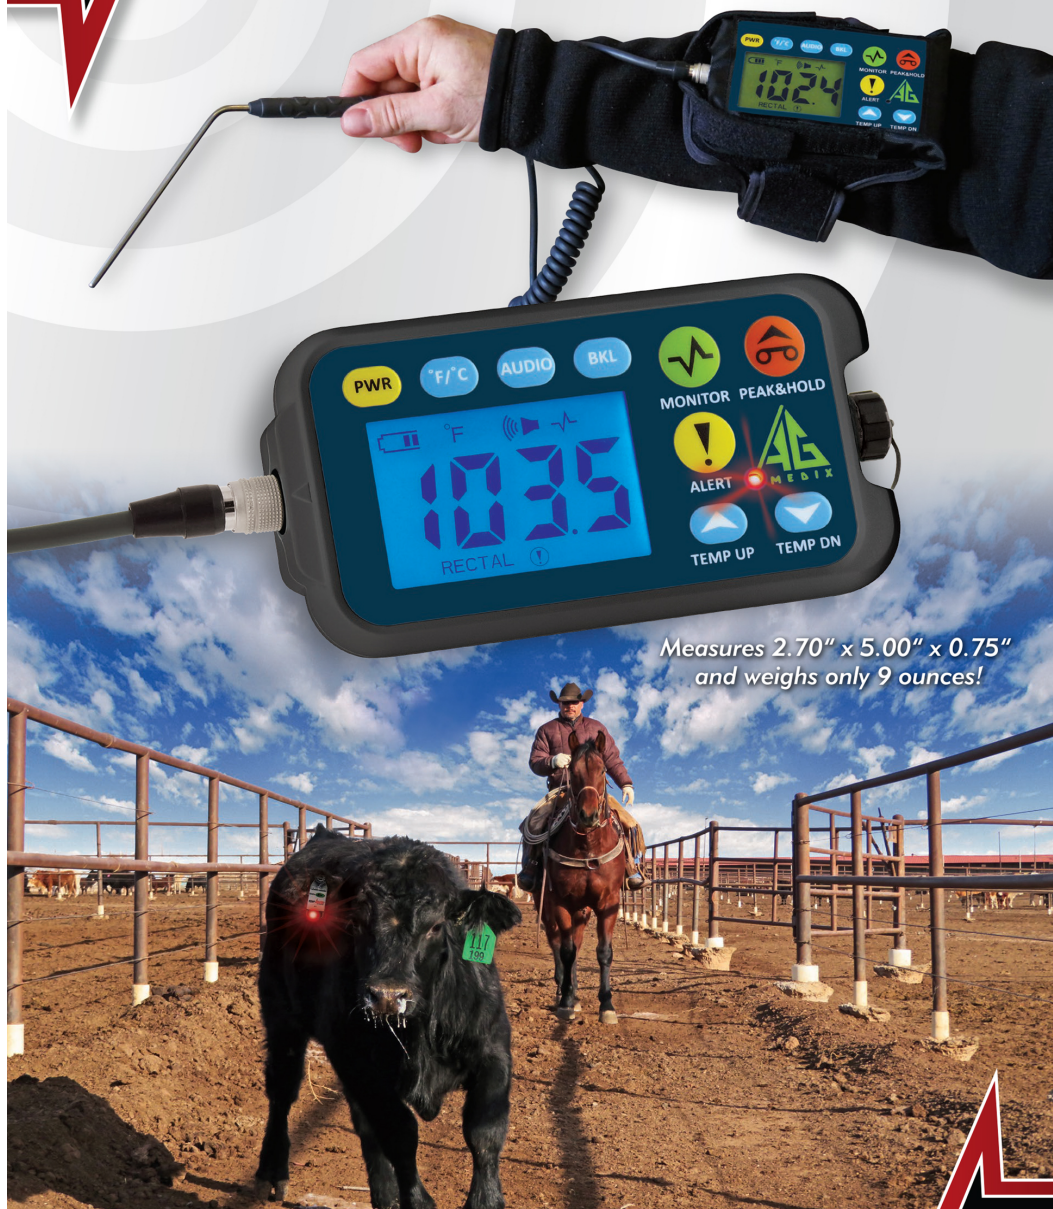

## Clinical Temperature Accuracy for Field Use

Co-designed by Veterinarians, Dairywomen and Cattlemen, we have created the ULTIMATE product for temping large animals in the field. The lightweight yet extremely rugged design makes the AG-102 the SAFEST and FASTEST device on the market!

## SAFE & ACCURATE!

- **Temperature Accuracy**  $\pm 0.1^{\circ}\text{F}$  with acquisition in as quickly as 7 seconds.
- **High Visibility Backlit Display** shows temperature, battery life, alert functions & more.
- **Programmable Alarm/Alert Functions** for identifying animals with suspect temperatures.
- **Rechargeable Battery** via USB, wall outlet or car charger (all Included).
- **Heated, Waterproof Probes** allow for fast acquisition times in the coldest temperatures. Available in straight or angled tips.

Measures 2.70" x 5.00" x 0.75"  
and weighs only 9 ounces!
